WARNING

Read and understand this instruction manual before operating instrument. Improper use of the gas monitor could result in bodily harm or death.

Periodic calibration and maintenance of the gas monitor is essential for proper operation and correct readings. Please calibrate and maintain this instrument regularly! Frequency of calibration depends upon the type of use you have and the sensor types. Typical calibration frequencies for most applications are between 1 and 3 months, but can be required more often or less often based on your usage.

WARNING: Understand manual before operating. Substitution of components may impair intrinsic safety. To prevent ignition of a hazardous atmosphere, batteries must only be changed or charged in an area known to be nonhazardous. Not tested in oxygen enriched atmospheres (above 21%).
Chapter 1: Introduction

Overview

This chapter briefly describes the GX-3R Pro gas monitor. This chapter also describes the GX-3R Pro Operator’s Manual (this document). Table 1 at the end of this chapter lists the specifications for the GX-3R Pro.

About the GX-3R Pro

Using an advanced detection system consisting of up to four gas sensors, the GX-3R Pro personal five-gas monitor detects the presence of combustible gas, oxygen (O₂), carbon monoxide (CO), hydrogen sulfide (H₂S), and CO₂ or a super toxic gas simultaneously. The GX-3R Pro’s compact size and easy-to-use design makes it ideally suited for a wide range of applications, including sewage treatment plants, utility manholes, tunnels, hazardous waste sites, power stations, petrochemical refineries, mines, paper mills, drilling rigs, and fire fighting stations. The GX-3R Pro offers a full range of features, including:

- Simultaneous monitoring of one to five gases
- Liquid crystal display (LCD) for complete and understandable information at a glance
- Ultrabright alarm LEDs
- Distinctive audible/vibrating alarms for dangerous gas conditions and audible alarms for unit malfunction
- Microprocessor control for reliability, ease of use, and advanced capabilities
- Data logging functions
- Alarm trend data
- STEL, TWA, and over range alarms
- Peak readings
- Built-in time function
- Lunch break feature
- CSA “C/US” classification for Class I, Division I, Groups A, B, C, and D hazardous atmospheres (pending)

WARNING: The Model GX-3R Pro detects oxygen deficiency, elevated levels of oxygen, combustible gases, carbon monoxide, and hydrogen sulfide, all of which can be dangerous or life threatening. When using the GX-3R Pro, you must follow the instructions and warnings in this manual to assure proper and safe operation of the unit and to minimize the risk of personal injury. Be sure to maintain and periodically calibrate the GX-3R Pro as described in this manual.
## Specifications

Approximately 65(H) x 73(W) x 34(D) mm (2.6"H x 2.9"W x 1.3"D)  
Approximately 140 g (4.9 oz.) |
About this Manual

The GX-3R Pro Operator’s Manual uses the following conventions for notes, cautions, and warnings.

**NOTE:** Describes additional or critical information.

**CAUTION:** Describes potential damage to equipment.

**WARNING:** Describes potential danger that can result in injury or death.
Chapter 2: Description

Overview

This chapter describes the GX-3R Pro instrument and its accessories.

Instrument Description

**Case**

The GX-3R Pro’s sturdy, high-impact plastic case is radio frequency (RF) resistant and is suitable for use in many environmental conditions, indoors and out. The case is dust proof and water resistant. A clear plastic window is located on the front of the case for viewing the LCD. The black bottom cover is located on the bottom of the case and allows access to the filters and sensors. A sensor retainer and filter gasket help orient and retain the sensor and filters.

Three threaded inserts on the back of the case allow for installation of an alligator clip or belt clip.

**LCD**

A digital LCD (liquid crystal display) is visible through a clear plastic window in the top case. The LCD simultaneously shows the gas reading for all installed sensors. The LCD also shows information for each of the GX-3R Pro’s operating modes.

---

**Figure 1: Component Location**
Control Buttons

Two control buttons, AIR and POWER MODE are located below the LCD.

<table>
<thead>
<tr>
<th>Button</th>
<th>Function(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>AIR</td>
<td>• turns on LCD backlight &lt;br&gt; • resets alarm condition if LATCHING is set to ON in Maintenance Mode &lt;br&gt; • enters User Mode, Maintenance Mode, and Gas Select Mode when used with POWER MODE button &lt;br&gt; • activates the demand zero function (adjusts the GX-3R Pro’s fresh air reading) &lt;br&gt; • changes the value of a parameter available for adjustment &lt;br&gt; • scrolls through parameter options</td>
</tr>
<tr>
<td>POWER MODE</td>
<td>• turns the GX-3R Pro on and off &lt;br&gt; • turns on LCD backlight &lt;br&gt; • enters and scrolls through Display Mode &lt;br&gt; • enters instructions into the GX-3R Pro’s microprocessor &lt;br&gt; • resets alarm condition if LATCHING is set to ON in Maintenance Mode &lt;br&gt; • enters User Mode, Maintenance Mode, and Gas Select Mode when used with AIR button</td>
</tr>
</tbody>
</table>

Alarm LEDs

Five sets of red alarm LEDs (light emitting diodes) around the edge of the case alert you to gas, low battery, and failure alarms.

Buzzer

One solid-state electronic buzzer is located inside the case. A hole in the middle front of the case allow the sound to exit the case. The buzzer sounds for gas alarms, malfunctions, low battery voltage, and as an indicator during use of the GX-3R Pro’s many display and adjustment options.

Vibrator

A vibrating motor inside the GX-3R Pro case vibrates for gas alarms, unit malfunctions, and as an indicator during normal use of the various modes of the GX-3R Pro.

NOTE: If STEALTH is set to ON, the vibrator only functions when VIBRATION in the STEALTH Gas Select Mode item is set to ON. See “Stealth and Vibrator Settings (STEALTH)” on page 151.

Sensors

The GX-3R Pro uses four sensors to monitor up to 5 gases simultaneously. The sensors are located inside the GX-3R Pro and are held in their sockets by the sensor retainer and bottom cover. The sensors use different detection principles, as described below.

**Combustible Gas Sensor**

The combustible gas sensor detects combustible gas in the % LEL range. It uses a catalytic element for detection. The reaction of gas with oxygen on the catalyst causes a change in the resistance of the element which affects the current flowing through it. The current is
amplified by the GX-3R Pro’s circuitry, converted to a measurement of combustible gas concentration, and displayed on the LCD.

The standard calibration for the combustible gas sensor is to methane but the sensor will still detect and respond to a variety of combustible gases.

**O₂/CO/H₂S/Super Toxic Sensors**

The O₂, CO, H₂S, and super toxic sensors are electrochemical cells that consist of two precious metal electrodes in a dilute acid electrolyte. A gas permeable membrane covers the sensor face and allows gas to diffuse into the electrolyte. The gas reacts in the sensor and produces a current proportional to the concentration of the target gas. The current is amplified by the GX-3R Pro’s circuitry, converted to a measurement of gas concentration, and displayed on the LCD.

There are 4 different types of CO and H₂S sensors available:

- CO only (ESR-A13P): A single electrochemical cell that detects CO. Instruments with this sensor cannot detect H₂S.
- H₂ compensated CO (ESR-A1CP): A single electrochemical cell that detects CO. This sensor does not respond to or responds minimally to hydrogen. Instruments with this sensor cannot detect H₂S.
- H₂S only (ESR-A13i): A single electrochemical cell that detects H₂S. Instruments with this sensor cannot detect CO.
- CO/H₂S (ESR-A1DR): A combination electrochemical cell that detects both CO and H₂S.

**IR Sensors**

The infrared sensors detect CO₂ in the ppm and %volume ranges. Gas enters the sensor through an opening on its face. Infrared light shines through the gas and into an infrared detector. The intensity of the infrared light changes with the gas concentration and this change is converted to an electrical signal. The instrument’s circuitry converts the signal into a gas concentration.

**Dummy Sensors**

Any unit that has less than 4 sensors will have a dummy sensor installed in one or more unused sensor positions. Dummy sensors are factory installed. The flat side of the dummy sensor should face away from the GX-3R Pro and the hollow side should face toward the GX-3R Pro.

**Filters**

**Combustible Gas Sensor H₂S Removal Filter Disk (Dark Red)**

An H₂S removal filter disk is placed into a recess in the filter gasket over the combustible gas sensor. It prevents H₂S in the ambient air from reaching the combustible gas sensor which prolongs the life of the sensor. The H₂S filter disk is dark red in color and although it may darken over time, its color is not indicative of remaining filter life.

The H₂S filter disk can absorb H₂S for 33 ppm hours and should be replaced after that much exposure. With this many ppm hours of absorption, the H₂S filter disk should be replaced after 80 minutes of exposure to 25 ppm H₂S. This equates to replacing the H₂S filter disk after 40 2-minute calibrations with a cylinder containing 25 ppm H₂S. If H₂S exists in the monitoring environment, the H₂S filter disk will have to be replaced more
Charcoal Filter (Black)
A black charcoal filter is placed into a recess in the filter gasket over the CO sensor. The charcoal filter disk scrubs H₂S and certain hydrocarbons out of the sample to avoid false CO readings. If false or elevated CO readings are noticed, especially in the presence of H₂S, change the charcoal filter.

If your instrument has a combo CO/H₂S sensor, it will have a filter installed that is half black charcoal filter and half white humidity filter.

Humidity Filter (White)
A white humidity filter covers the H₂S sensor.

If your instrument has a combo CO/H₂S sensor, it will have a filter installed that is half black charcoal filter and half white humidity filter.

SO₂ Sensor H₂S Removal Filter Disk (Tan)
An H₂S removal filter disk is placed into a recess in the filter gasket over the SO₂ sensor (if an SO₂ sensor is installed). It prevents H₂S in the ambient air from reaching the SO₂ sensor which prolongs the life of the sensor.

Hydrophobic Dust Filter
The hydrophobic dust filter sits on the filter gasket, covering the sensor ports and the filters.

Infrared Communications Port
An infrared (IR) communications port is located on the top of the case, near the top LEDs. The data transmitted through the port is in standard IrDA protocol. A computer’s infrared port or an IrDA/USB cable connected to a USB port can be used to download data saved by the GX-3R Pro to a computer using the GX-3R Pro Data Logger Management Program. See the GX-3R Pro Data Logger Management Program operator’s manual for data logging and downloading instructions.

Battery Pack
The GX-3R Pro is either powered by a rechargeable lithium-ion (Li-ion) battery pack or an alkaline battery pack. Instruments with a Li-ion battery pack have a charging socket on the back of the instrument. Instruments with an alkaline battery pack have a cover that allows for battery replacement.

The battery icon in the upper right of the LCD shows remaining battery life. When the GX-3R Pro detects a low battery voltage, a low battery warning is activated. When battery voltage is too low for Measuring Mode, the GX-3R Pro sounds a dead battery alarm.

NOTE: Use of batteries or battery chargers not specified by RKI Instruments, Inc. will compromise the CSA classification and may void the warranty. See pg.93 and pg.94 for more information.

WARNING: To prevent ignition of a hazardous atmosphere, batteries must only be changed or charged in an area known to be nonhazardous.
Included Accessories

Alligator Clip
An alligator clip is installed on the back of the GX-3R Pro. The alligator clip can be used to attach the GX-3R Pro to clothing or a belt. Teeth in the alligator clip’s jaws prevent the unit from slipping off. The alligator clip can be rotated to change how the instrument is oriented when worn.

Rubber Boot
A black rubber boot is installed on the GX-3R Pro.

Wrist Strap
A wrist strap is included with the GX-3R Pro and can be attached to the wrist strap installation feature on the left side of the GX-3R Pro’s case.

Single-Unit Charging Cable
The charging cable has an AC adapter on one end and a charging plug that connects to the GX-3R Pro on the other end.
Calibration Cup
Use the calibration cup to apply gas during a bump test, calibration, or gas test. The calibration cup has an installation orientation to observe. “Front” and “rear” imprinting on the bottom of the cup correspond to the front and rear of the GX-3R Pro when the calibration cup is installed. In addition, a “front” label on the front of the calibration cup should be visible when viewing the LCD with the calibration cup installed.

![Calibration Cup Image]

Figure 4: Calibration Cup

Other Accessories

Multi-Unit Charger
The multi-unit charger is a wall plug style adapter that plugs into a bar. The bar has five 4-foot cables coming out one side. The end of each of the five cables has a plug that connects to the GX-3R Pro’s power jack. The AC adapter is rated 100 - 240 VAC input, 5.99 VDC output.

Belt Clip
A belt clip makes it easy to hook the GX-3R Pro to a utility belt.

SDM-3R
The SDM-3R is a calibration station for the GX-3R and GX-3R Pro. The station’s buttons can be used for operations (Standalone Mode) or a computer can be used to control the docking station (PC Controlled Mode). See the appropriate SDM-3R manual for more information.

RP-3R
The RP-3R is a pump that allows sample to be drawn to the GX-3R Pro.

IrDA Cable
Unless your computer has a built-in IrDA port, an IrDA cable is needed to establish communication between the GX-3R Pro and the Datalogging Program or the User Setup Program.
Chapter 3: Operation

Overview

This chapter explains how to use the GX-3R Pro to perform confined space entry monitoring or general area monitoring in Measuring Mode. Display Mode is accessed by pressing POWER MODE from Measuring Mode and is described on pg.34.

Start Up

This section explains how to start up the GX-3R Pro, get it ready for operation, and turn it off.

NOTE: The screens illustrated in this section are for a 4-gas + 0 - 10.00% volume CO₂ unit. The screens displayed by your GX-3R Pro may be slightly different.

Turning On the GX-3R Pro

To illustrate certain functions, the following description of the GX-3R Pro start up sequence assumes that the following menu items are turned on: LUNCH BREAK, CAL REMINDER, and BUMP REMINDER in User Mode, and ID DISPLAY and AUTO ZERO in Maintenance Mode. If any of these items are turned off, then the corresponding screens will not appear.

1. Press and briefly hold down POWER MODE. Release the button when you hear a beep.

2. If LUNCH BREAK is set to ON (factory setting is OFF, see pg.81), the Lunch Break Screen appears. The unit counts down from 5 seconds.

   a. Continue Accumulating: To continue accumulating peak and time-weighted average (TWA) readings from the last time the GX-3R Pro was used, press and release POWER MODE or allow the countdown to reach 0. The short-term exposure limit (STEL) reading is reset each time the GX-3R Pro is turned on.

   b. Reset Accumulation: To reset the accumulation of peak and time-weighted average (TWA) readings, press and release AIR before the countdown reaches 0.
3. If **CAL REMINDER** is set to **ON** (factory setting) and a calibration is due, the screen that appears next depends on how **CAL EXPIRED** is set in User Mode (see pg.69). The three possible screens are described below. If a calibration is not due, the instrument will tell you how many days are left until a calibration is due.

<table>
<thead>
<tr>

4. If **BUMP REMINDER** is set to **ON** (factory setting is **OFF**) and a bump test is due, the screen that appears next depends on how **BUMP EXPIRED** is set in User Mode (see pg.74). The three possible screens are described below. If a bump test is not due, the instrument will tell you how many days are left until a bump test is due.

<table>
<thead>
<tr>

</table>

5. The Date/Time Screen appears for a few seconds.

![Date/Time](image)

6. The Battery Voltage Screen appears for a few seconds. The battery voltage is shown on the top line. The alarm latching/self-resetting setting is shown on the second line (see pg.138 for a description of how to change this setting). The battery pack type is shown on the bottom line.

![Battery Voltage](image)
The following screens display for 3 seconds each: the Gas Name Screen, the Full Scale Screen, the Warning Setpoint Screen, the Alarm Setpoint Screen, the Alarm H Setpoint Screen, the STEL Alarm Screen, and the TWA Alarm Screen.

**NOTE:** If the combustible gas is set to something other than CH4 or H2 in Gas Select Mode, the combustible channel is displayed as “HC” and the gas formula for the combustible gas sensor’s target gas appears during startup.

</table>
8. If ID DISPLAY is set to ON (factory setting is OFF, see pg.139), the User ID Screen appears for a few seconds, followed by the Station ID Screen.

9. If the GX-3R Pro experiences a sensor failure during start up, a screen indicating which sensor failed appears and the buzzer sounds a double pulsing tone once per second. In the example below, the combustible gas sensor has failed.

Press and release POWER MODE to acknowledge the failure and continue. The gas reading for the failed sensor will be replaced by “- - - -”. Replace the failed sensor as soon as possible.

10. If AUTOZERO is set to ON (factory setting is OFF, see pg.139), the instrument prompts you to do an auto zero. An auto zero operation sets the combustible gas, H$_2$S, CO, and super toxic channels to zero and the OXY channel to 20.9%.

**WARNING:** Make sure that the instrument is in a known fresh air environment (an environment free of combustible or toxic gases and of normal oxygen content, 20.9%) before performing an auto zero operation. If you perform an auto zero operation in an area with gases present, the adjustment will not be accurate.

a. An auto zero operation sets the combustible gas, H$_2$S, CO, and super toxic channels to 0 and the OXY channel to 20.9%.

b. If the instrument has a CO$_2$ sensor installed and if CO2AIR SETTING is set to ON in User Mode, the CO$_2$ channel gets set to 400 ppm (0.04% volume) during an auto zero. If CO2AIR SETTING is set to OFF in User Mode, the CO$_2$ channel is not adjusted during the auto zero.

c. You must press and release the POWER MODE button to perform an auto zero function. If you do not press any key, after 15 seconds, the instrument will enter Measuring Mode without performing an auto zero.
11. The GX-3R Pro is now monitoring for gas in Measuring Mode. The Measuring Mode Screen appears displaying the current gas reading for each target gas.

Performing a Demand Zero

Before using the GX-3R Pro, it is recommended to set the fresh air readings for the target gases by performing a demand zero. This will set the combustible gas, H2S, CO, and super toxic channels to zero and the OXY channel to 20.9%.

If the instrument has a CO2 sensor installed and if CO2AIR SETTING is set to ON in User Mode, the CO2 channel gets set to 400 ppm (0.04% volume). If CO2AIR SETTING is set to OFF in User Mode, the CO2 channel is not adjusted during the demand zero.

1. Find a fresh-air environment. This is an environment free of toxic or combustible gases and of normal oxygen content (20.9%).
2. Turn on the unit as described above in “Turning On the GX-3R Pro”.
3. Press and hold AIR. The LCD prompts you to continue holding AIR and the buzzer will pulse while you hold the button (if KEY TONE is set to ON in User Mode).
4. Continue to hold AIR until the LCD prompts you to release it. The GX-3R Pro will set the fresh air reading for all channels. Start up is complete and the unit is now ready for monitoring.

Turning Off the GX-3R Pro

1. Press and hold POWER MODE.
2. TURN OFF will appear on the display and the buzzer will pulse for about five seconds (if KEY TONE is set to ON in User Mode).
3. Release the button when TURN OFF disappears from the display.
Measuring Mode Operation

When the GX-3R Pro completes its startup sequence, it is in Measuring Mode. In Measuring Mode the GX-3R Pro continuously monitors the sampled atmosphere and displays the gas concentrations present for its target gases. The GX-3R Pro is considered to be in Normal Operation if there are no alarm indications.

If BUMP REMINDER is set to ON and if a bump test is not due, a check mark will appear in the upper left corner of the LCD.

If the instrument is operating in Stealth Mode, an “S” will appear at the top of the LCD.

<table>
<thead>
<tr>

<td>20.9</td>
<td>0.00</td>
<td></td>
</tr>
</tbody>
</table>

In a low-light environment, press and release either button to turn on the display backlight. See pg.84 to set the backlight time.

If the BEEP menu item in User Mode is set to anything other than OFF, the GX-3R Pro will give periodic indications to confirm that it’s operating or to indicate a non-compliance (see pg.82 for instructions).

Monitoring an Area

1. Start up the GX-3R Pro as described above in “Start Up” on page 18. It is now in Measuring Mode.

2. Take the GX-3R Pro to the monitoring area.

3. Wait at least 15 seconds and observe the display for gas readings. If a reading is observed, allow the reading to stabilize to determine the gas concentrations present.

4. If a gas alarm occurs, take appropriate action. See pg.29.
Combustible Gas Detection

There are three issues to keep in mind when monitoring for combustible gas.

- The combustible gas sensor will respond to any combustible gas. The standard calibration gas for the combustible gas channel is methane (CH$_4$). If the instrument is setup for and calibrated to a different combustible gas, such as hexane or propane, the gas name right above the readings displays as “HC”.

The table below lists the conversion factors for several hydrocarbon gases if the GX-3R Pro is calibrated to methane. To use this table, multiply the display reading on the combustible gas channel by the factor in the appropriate row to obtain the actual gas concentration. For example, if you are detecting ethylene and the display reads 10% LEL for the combustible gas channel, you actually have 10% LEL x 1.20 = 12.0% LEL ethylene present.

**Table 6: LEL Hydrocarbon Conversions**

</tr>
</tbody>
</table>

- The GX-3R Pro provides the combustible gas sensor with some protection against exposure to high levels of combustible gas which can damage the sensor. It does this by turning off the combustible gas sensor power temporarily when it determines that an over scale (more than 100 %LEL) concentration of combustible gas is present that may damage the sensor. Nevertheless, concentrations of combustible gas of more than 100 %LEL can still affect the zero level or calibration of the combustible gas sensor if the concentration is high enough.

**CAUTION:** Do not expose the combustible gas sensor to high concentrations of combustible gas such as that from a butane lighter. Exposure to high concentrations of combustible gas may adversely affect the performance of the sensor.
**CAUTION:** Any rapid increase in the combustible gas reading on the combustible gas channel followed by a declining or erratic reading may indicate a gas concentration above the LEL which may be hazardous.

- Some gases such as silicone vapors, chlorinated hydrocarbons, and sulphur compounds can contaminate the detection elements inside the combustible gas sensor damaging the sensor and result in reduced response to combustible gas. Make every effort to avoid these gases.

  The H₂S scrubber disks protect the combustible sensor from H₂S, but you should avoid other sulphur compounds.

**CO₂ Detection**

- A background level of CO₂ exists in fresh air. Table 7 below indicates a typical gas reading in fresh air.

  **Table 7: Carbon Dioxide Fresh Air Readings**

<table>
<thead>
<tr>
<th>Sensor Range</th>
<th>Approximate Fresh Air Reading</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 - 10.00% volume</td>
<td>0.04% volume</td>
</tr>
<tr>
<td>0 - 10,000 ppm</td>
<td>400 ppm</td>
</tr>
</tbody>
</table>

- Performing a demand zero, an auto zero, or an **AIR CAL** will either set to CO2 channel to 400 ppm (0.04% volume) or exclude the CO2 channel based on the setting of the **CO2AIR SETTING** User Mode parameter. See pg.87 for more information.

**Toxic Gas Detection**

**Positive Interference**

The table below indicates some of the gases that will cause an increased gas reading for the affected sensor. For example, if you are attempting to detect SO₂ but H₂ is also present, the instrument’s SO₂ reading will be higher than the environment’s actual SO₂ level.

**Table 8: Positive Interference**

<table>
<thead>
<tr>
<th>Sensor</th>
<th>Affected By:</th>
</tr>
</thead>
<tbody>
<tr>
<td>SO₂</td>
<td>H₂</td>
</tr>
</tbody>
</table>
**Negative Interference**

The table below indicates some of the gases that will cause a negative response and a decreased reading for the affected sensor. For example, if you are attempting to detect SO$_2$ but NO$_2$ is also present, the instrument’s SO$_2$ reading will be lower than the environment’s actual SO$_2$ level.

<table>
<thead>
<tr>
<th>Sensor</th>
<th>Affected By:</th>
</tr>
</thead>
<tbody>
<tr>
<td>SO$_2$</td>
<td>NO$_2$</td>
</tr>
</tbody>
</table>

**Alarms**

This section covers alarm indications in Measuring Mode. It also describes how to reset the GX-3R Pro after an alarm occurs and how to respond to an alarm condition.

**NOTE:** False alarms may be caused by radio frequency (RF) or electromagnetic (EMI) interference. Keep the GX-3R Pro away from RF and EMI sources such as radio transmitters or large motors.

**Alarm Indications**

The GX-3R Pro buzzer will sound an alarm, the LEDs will flash, and the vibrator will pulse when any sort of alarm condition or failure is encountered. If the GX-3R Pro is operating in Stealth Mode, the buzzer will not sound and the vibrator’s operation will depend on the VIBRATION setting in Gas Select Mode’s STEALTH menu item. See pg.151 for more information.

**NOTE:** If an alarm condition occurs while you are in Display Mode, the GX-3R Pro will automatically bring up the alarm screen instead.

The table below summarizes the types of alarms produced by the GX-3R Pro and their indications.

None of the Man Down alarm indications will happen if MAN DOWN is set to OFF (factory setting) in User Mode. The Panic alarm will not happen if PANIC is set to OFF (factory setting) in User Mode.

| **Dead Battery Alarm**           | • Gas readings disappear and \textbf{FAIL BATTERY} appears at the bottom of the LCD  
• Alarm LEDs flash once per second  | Double pulsing tone once per second  |
| **Sensor Failure**               | • \textbf{FAIL SENSOR} appears at the bottom of the LCD and the failed sensor(s) are indicated with \textbf{FAIL} under the gas name.  
• Alarm LEDs flash once per second  | Double pulsing tone once per second  |
Responding to Alarms

This section describes response to gas, over range, battery, sensor failure, clock failure, system failure, man down, and panic alarms.

**Responding to Gas Alarms**

1. Determine which gas alarm has been activated.
2. Follow your established procedure for an increasing gas condition or a decreasing oxygen condition.
3. Reset the alarm as necessary or allowed.
   a. If **LATCHING** is set to **ON** (factory setting) in Maintenance Mode, the gas reading must fall below (or rise above for an oxygen low alarm) an alarm setting before you can reset the alarm condition using POWER MODE or AIR.

<td></td>
</tr>
</tbody>
</table>
b. If **LATCHING** is set to **OFF** in Maintenance Mode, the alarm condition will automatically reset when gas reading falls below (or rises above for an oxygen low alarm) an alarm setpoint.

**Responding to Over Range Alarms**

**WARNING:** *An over range condition may indicate an extreme combustible gas, toxic gas, or oxygen concentration. Confirm the gas concentration with a different GX-3R Pro or with another gas detecting device.*

**CAUTION:** *High off-scale readings may indicate an explosive concentration.*

**PRUDENCE:** *Des lectures élevées hors échelle peuvent indiquer une concentration explosive.*

1. Determine which channel is in alarm.
2. Follow your established procedure for an extreme gas condition.
3. If **LATCHING** is set to **ON** (factory setting) in Maintenance Mode, reset the alarm using POWER MODE or AIR once the alarm condition has cleared.
4. Calibrate the GX-3R Pro as described on pg.57.
5. If the over range condition continues or if you are not able to successfully calibrate the unit, you may need to replace the sensor that has triggered the over range alarm.
6. If the over range condition continues after you have replaced the sensor, contact RKI Instruments, Inc. for further instructions.

**Responding to Battery Alarms**

**WARNING:** *The GX-3R Pro is not operational as a gas monitoring device during a dead battery alarm. Take the Model GX-3R Pro to a non-hazardous area and replace or recharge the batteries as described in “Replacing the Batteries (Alkaline Version)” on page 93.*

The GX-3R Pro is fully functional during a low battery warning. However, only a limited amount of operating time remains, approximately 1 - 2 hours. The amount of time depends on how often the LCD backlight is used and how often the unit is responding to alarm conditions. Recharge the Li-ion battery pack (pg.94) or replace the alkaline batteries (pg.93) as soon as possible.

**NOTE:** Alarms and the LCD back light consume battery power and reduce the amount of operating time remaining.

**Responding to Sensor Failure Alarms**

1. Determine which sensor has triggered the sensor failure alarm.
2. Try calibrating the failed sensor, as described on pg.57 before replacing it.
3. If the sensor failure continues, replace the sensor as described on pg.98
4. If the sensor failure condition continues after you have replaced the sensor, contact RKI Instruments, Inc. for further instructions.
Responding to Clock Failure Alarms

A clock failure alarm occurs if the unit’s internal clock malfunctions.

1. Press and release POWER MODE to continue into Measuring Mode.

   **CAUTION:** There will be no datalogging function if you operate the instrument after a clock failure.

2. Attempt to set the date using the **DATE** User Mode menu item as described on pg.87.
3. If the date cannot be set correctly, contact RKI Instruments, Inc. as soon as possible.

Responding to System Failure Alarms

1. If a system failure occurs, the system failure screen will display an error code as shown below:

   ![FAIL CLOCK](image)

   031

   FAIL SYSTEM

2. The error code meanings are shown in the table below:

   **Table 11: Error Code Explanation**

<table>
<thead>
<tr>
<th>Error Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>000</td>
<td>ROM failure</td>
</tr>
<tr>
<td>010</td>
<td>RAM failure</td>
</tr>
<tr>
<td>021</td>
<td>FRAM failure</td>
</tr>
<tr>
<td>031</td>
<td>FLASH memory failure</td>
</tr>
<tr>
<td>080</td>
<td>Acceleration sensor failure</td>
</tr>
<tr>
<td>081</td>
<td>PCB failure</td>
</tr>
<tr>
<td>082</td>
<td>Temperature sensor failure</td>
</tr>
<tr>
<td>083</td>
<td>Bluetooth failure</td>
</tr>
</tbody>
</table>
3. If the error code is anything but 031 as shown above, the instrument cannot be used. Contact RKI Instruments, Inc. as soon as possible.

If the error code is 031, you may press and release POWER MODE to continue into Measuring Mode if the instrument must be used temporarily.

**CAUTION:** There will be no datalogging function if you operate the instrument after a 031 system failure. Contact RKI Instruments, Inc. as soon as possible.

**Responding to a Man Down Warning 1 and Warning 2**

The Man Down Warning 1 and Warning 2 alarms occur after the **WARNING 1 TIME** and **WARNING 2 TIME**, respectively, has passed since the last movement of the instrument. See pg.77 for instructions to change these values.

1. Follow your established procedure for a man down warning.

2. To silence the alarm and reset the Man Down clock, move the instrument or press and release POWER MODE.

**Responding to a Man Down Alarm**

The Man Down Alarm alarms occur after the **ALARM TIME** has passed since the last movement of the instrument. See pg.77 for instructions to change this value.

1. Follow your established procedure for a man down alarm.

2. To silence the alarm and reset the Man Down clock, press and release POWER MODE or AIR. Moving the instrument will not reset the alarm or Man Down clock.

**Responding to a Panic Alarm**

If the user is in a dangerous situation or feels that others must be alerted to any sort of problem, forcefully tapping the instrument twice will initiate a panic alarm.

1. Press and release POWER MODE or AIR to silence and reset the alarm.

**Data Logging**

The GX-3R Pro features the ability to log data to its internal memory and download it to a computer via the infrared communications port on the front of the unit. It logs gas readings in Measuring Mode, alarm data, and calibration data.

To utilize the GX-3R Pro’s downloading capability, you will need the GX-3R Data Logger Management Program and a computer with an infrared port or a USB port that runs one of the following operating systems: Windows 7, Windows 8, or Windows 10. If your computer has an infrared port, then no additional accessories are needed to download data from the GX-3R Pro. If your computer does not have an infrared port but does have a USB port, a USB/IrDA adapter cable can be used to download data from the GX-3R Pro using the USB port. The GX-3R Data Logger Management Program is available at www.rkiinstruments.com/gx3rpro. The USB/IrDA adapter cable is available from RKI Instruments, Inc.

The data logging capacity depends on how often the GX-3R Pro stores data, how many channels are active, and how often the GX-3R Pro is turned on and off. The table below illustrates how much data logging time is available for the various interval times. It assumes that the unit has four sensors, is only turned on once, and there are no alarm occurrences. The data logging interval time must be set using the GX-3R Data Logger Management Program.
For a complete description of the Data Logger Management Program and procedures for downloading data to a computer, see the GX-3R Data Logger Management Program Operator’s Manual.

</tbody>
</table>
### Tips for Using Display Mode

- To enter Display Mode and scroll from one menu item to the next or skip an item when a question is asked, press and release POWER MODE.
- To enter an item, press and release AIR.
- To change a flashing parameter, use AIR. To reverse the direction of movement in a list (i.e. from down to up or vice versa):
  a. Press and hold AIR.
  b. Immediately press POWER MODE and then release both buttons.
- To exit from an entered-information screen and go back to the main menu, press and release POWER MODE.

**NOTE:** Each screen displays for 20 seconds. If you do not press a button within 20 seconds, the GX-3R Pro automatically returns to Measuring Mode.

---

### Table 13: Display Mode Menu Items

<table>
<thead>
<tr>
<th>Display Mode Menu Item</th>
<th>Description</th>
</tr>
</thead>
</table>
| LCD BACK-GROUND (pg.44)\(^A\) | ON: LCD has black background with white characters.  
OFF (factory setting): LCD has white background with black characters. |
| BLUETOOTH (pg.44)\(^A\) | ON: Turns Bluetooth functionality on.  
OFF (factory setting): Turns Bluetooth functionality off. |
| BUZZER VOLUME (pg.45)\(^A\) | HIGH (factory setting): Buzzer volume is high.  
LOW: Buzzer volume is low. |
| LANGUAGE (pg.46)\(^E\) | Change the language of the instrument back to English if something other than English was selected in User Mode. |

\(^A\) **Only appears if** D MODE SETTING **is set to** ON **in User Mode (factory setting) and if CH4 or i-C4H10 is selected for the combustible gas in Gas Select Mode.**

\(^B\) **Only appears if** D MODE SETTING **is set to** ON **in User Mode (factory setting) and if ID DISPLAY is set to** ON **in Maintenance Mode (factory setting is OFF).**

\(^C\) **Only appears if** CAL REMINDER **is set to** ON **in User Mode (factory setting).**

\(^D\) **Only appears if** BUMP REMINDER **is set to** ON **in User Mode (factory setting is OFF).**

\(^E\) **Only appears if** LANGUAGE **is set to something other than** ENGLISH **in Maintenance Mode.**
Peak Screen (PEAK)

The peak screen displays the highest (lowest for oxygen) concentrations detected since the GX-3R Pro was turned on. Peak readings are stored in the GX-3R Pro’s memory until a higher level is detected (lower for oxygen), the peak reading is cleared, or the GX-3R Pro is turned off.

The lunch break feature enables the GX-3R Pro to save peak readings when it is turned off so it can continue with the same peaks when it is turned on again. See pg.81 for instructions to turn the lunch break feature on (default is off).

To clear the peak readings, do the following:
1. While in Display Mode, press and release POWER MODE until **PEAK** appears.
2. Press and hold AIR until the screen prompts you to release it.
3. The peak readings will be reset and the unit will return to the Peak Screen.

If you do not want to clear the peak readings, release AIR before the above screen sequence occurs. The unit will return to the Peak Screen.

STEL Screen (STEL)

The STEL Screen displays the short term exposure limit (STEL) readings for \(H_2S\), CO, \(CO_2\), and super toxic only. The STEL reading is the average reading over the last 15 minutes.

<table>
<thead>
<tr>
<th>CH4</th>

<thead>
<tr>
<th>CO2</th>
<th>vol%</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.50</td>
<td></td>
</tr>
</tbody>
</table>

**STEL**
TWA Screen (TWA)

The TWA Screen displays the time weighted average (TWA) readings for $H_2S$, $CO$, $CO_2$, and super toxic only.

The TWA reading is the average reading over the last 8 hours. If 8 hours have not elapsed since the last time the TWA reading was cleared, the average is still calculated over 8 hours. The missing time is assigned a 0 value for readings. If LUNCH BREAK is set to OFF (factory setting), the TWA is cleared when the GX-3R Pro is turned off.

If LUNCH BREAK is set to ON, the GX-3R Pro will remember TWA readings when it is turned off so it can continue them when it is turned on again. See pg.81 for instructions to turn the lunch break feature on (default is off).

HC GAS LIST

The HC GAS LIST screen allows you to select the target gas for the combustible gas sensor. This screen only appears if D MODE SETTING in User Mode is set to ON (factory setting) and if CH4 or iC4H10 is selected for the combustible channel in Gas Select Mode.

If you select a new target gas, the change is saved if you turn the instrument off and on.

1. While in Display Mode, press and release POWER MODE until HC GAS LIST appears. The current setting is displayed on the top line.

2. Press and release AIR to enter the screen. The cursor will be to the left of the current gas selection.
3. Use AIR to scroll through the list of gases.

- CH4 (methane)
- i-C4H10 (isobutane)
- H2 (hydrogen)
- CH3OH (methanol)
- C2H2 (acetylene)
- C2H4 (ethylene)
- C2H6 (ethane)
- C2H6 (ethane)
- C2H5OH (ethanol)
- C3H6 (propylene)
- C3H6O (acetone)
- C3H8 (propane)
- C4H6 (butyne)
- C5H10 (cyclopentane)
- C6H6 (benzene)
- n-C6H14 (hexane)
- C7H8 (toluene)
- n-C7H16 (heptane)
- C8H10 (xylene)
- n-C9H20 (nonane)
- EtAc (ethyl acetate)
- IPA (isopropyl alcohol)
- MEK (methyl ethyl ketone)
- MMA (methyl methacrylate)
- DME (dimethyl ether)
- MIBK (methyl isobutyl ketone)
- THF (tetrahydrofuran)

4. When the desired gas is displayed, press and release POWER MODE. The changes are saved and the instrument returns to the **HC GAS LIST** screen.

5. The gas formula displays at the bottom of the Measuring Mode screen. The gas selection remains in effect if you turn the instrument off and on again.

### User ID Screen (USER ID)

This screen only appears if **D MODE SETTING** in User Mode is set to **ON** (factory setting) and if **ID DISPLAY** in Maintenance Mode is set to **ON** (factory setting is **OFF**).

Use this screen to select a user ID from the 128 user IDs that are stored in the GX-3R Pro’s memory. Before a user ID is selected on a brand new instrument, the user ID is “----------”. The factory-installed user IDs have a “U_ID_XXX” format.

The user ID provides a way to identify the GX-3R Pro user during a data logging session. If the user ID is changed during an operating session, a new data session is initiated with the new user ID attached to it.

User IDs can only be selected in this menu item. In order to edit the 128 user IDs, you must use the GX-3R Datalogging Program.

1. After entering Display Mode, press and release POWER MODE until **USER ID** appears.
2. To change the User ID, press and release AIR. The current User ID will flash.

3. Use AIR to scroll to the desired User ID. To reverse the scrolling direction:
   a. Press and hold AIR.
   b. Immediately press POWER MODE and then release both buttons.
4. Press and release POWER MODE to save the User ID and return to the USER ID screen in Display Mode.

**Station ID Screen (STATION ID)**

This screen only appears if **D MODE SETTING** in User Mode is set to **ON** (factory setting) and if **ID DISPLAY** in Maintenance Mode is set to **ON** (factory setting is **OFF**).

Use this screen to select a station ID from the 128 station IDs that are stored in the GX-3R Pro’s memory. Before a station ID is selected on a brand new instrument, the station ID is “----------”. The factory-installed station IDs have a “S_ID_XXX” format.

The station ID provides a way to identify the GX-3R Pro location during a data logging session. If the station ID is changed during an operating session, a new data session is initiated with the new station ID attached to it.

User IDs can only be selected in this menu item. In order to edit the 128 user IDs, you must use the GX-3R Datalogging Program.

1. After entering Display Mode, press and release POWER MODE until **STATION ID** appears.

2. To change the Station ID, press and release AIR. The current Station ID will flash.
3. Use AIR to scroll to the desired Station ID. To reverse the scrolling direction:
   a. Press and hold AIR.
   b. Immediately press POWER MODE and then release both buttons.
4. Press and release POWER MODE to save the Station ID and return to the STATION ID screen in Display Mode.

**Last Successful Calibration Date (CAL DATA)**

The CAL DATA screen shows the date of the last successful calibration for each of the installed sensors. This screen only appears if CAL REMINDER is set to ON in User Mode.

1. While in Display Mode, press and release POWER MODE until CAL DATA appears.
2. Press AIR to enter the CAL DATA screen and to scroll through the installed sensors.
3. When you are done viewing the last calibration date for the sensors, press and release POWER MODE to return to the CAL DATA screen in Display Mode.

---

**Last Successful Bump Test Date (BUMP DATA)**

The BUMP DATA screen shows the date of the last successful bump test for each of the installed sensors. This screen only appears if BUMP REMINDER is set to ON in User Mode.

1. While in Display Mode, press and release POWER MODE until BUMP DATA appears.
2. Press AIR to enter the BUMP DATA screen and to scroll through the installed sensors.

3. When you are done viewing the last bump test date for the sensors, press and release POWER MODE to return to the BUMP DATA screen in Display Mode.
Date, Time, Temperature Screen (DATE)

The DATE screen shows the date and time of the instrument and the temperature of the surrounding area.

1. While in Display Mode, press and release POWER MODE until DATE appears.

<table>
<thead>
<tr>
<th>7:49</th>
<th>1/14/2019</th>
<th>7:49</th>
</tr>
</thead>
<tbody>
<tr>
<td>DATE</td>
<td>24°C</td>
<td></td>
</tr>
</tbody>
</table>

Alarm Points Screen (ALARM POINTS)

The Alarm Points Screen allows you to view the gas alarm settings for all active channels.

1. While in Display Mode, press and release POWER MODE until ALARM POINTS appears.
2. Press and release AIR to enter the Alarm Points screen. The Full Scale Settings screen will appear showing full scale settings for each channel.
3. Use AIR to scroll through the Warning, Alarm, Alarm H, STEL, and TWA settings.

4. Press and release POWER MODE to return to the ALARM POINTS item in Display Mode.

---

### Screen Inversion On/Off (INVERT SELECT)

The INVERT SELECT screen allows you to turn the screen inversion function on or off. This screen only appears if D MODE SETTING in User Mode is set to ON (factory setting).

**ON:** The LCD stays upside down relative to instrument.

**AUTO:** The LCD automatically flips to remain readable whether the instrument is right side up or upside down.

**OFF** (factory setting): The LCD stays right side up relative to the instrument.
1. While in Display Mode, press and release POWER MODE until INVERT SELECT appears. The current setting is displayed on the top line.

2. Press and release AIR. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to the INVERT SELECT screen.

**LCD Color Scheme (LCD BACKGROUND)**

The LCD BACKGROUND screen allows you to change the appearance of the LCD. This screen only appears if D MODE SETTING in User Mode is set to ON (factory setting).

**ON:** LCD has black background with white characters.

**OFF** (factory setting): LCD has white background with black characters.

1. While in Display Mode, press and release POWER MODE until LCD BACKGROUND appears. The current setting is displayed on the top line.

2. Press and release AIR. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting. The LCD BACKGROUND menu item will be displayed.

**Turning Bluetooth On/Off (BLUETOOTH)**

The BLUETOOTH screen allows you to turn the GX-3R Pro’s Bluetooth functionality on and off. This screen only appears if D MODE SETTING in User Mode is set to ON (factory setting).

**ON:** Turns Bluetooth functionality on, allowing for connection to the RK Link app on your phone.

**OFF** (factory setting): Turns Bluetooth functionality off.
1. While in Display Mode, press and release POWER MODE until **BLUETOOTH** appears. The current setting is displayed on the top line.

<table>
<thead>
<tr>
<th>OFF</th>
<th>BLUETOOTH</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHANGE : AIR</td>
<td></td>
</tr>
</tbody>
</table>

2. Press and release AIR. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to the **BLUETOOTH** screen.

### Adjusting the Buzzer Volume (BUZZER VOLUME)

The **BUZZER VOLUME** screen allows you to adjust the volume of the instrument’s buzzer. This screen only appears if **D MODE SETTING** in User Mode is set to **ON** (factory setting).

- **HIGH** (factory setting): Buzzer volume is high.
- **LOW**: Buzzer volume is low.

1. While in Display Mode, press and release POWER MODE until **BUZZER VOLUME** appears. The current setting is displayed on the top line.

<table>
<thead>
<tr>
<th>HIGH</th>
<th>BUZZER VOLUME</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHANGE : AIR</td>
<td></td>
</tr>
</tbody>
</table>

2. Press and release AIR. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting. The **BUZZER VOLUME** menu item will be displayed.
Changing Instrument Language Back to English (LANGUAGE)

This screen only appears if the LANGUAGE item in Maintenance Mode is set to something other than ENGLISH.

1. While in Display Mode, press and release POWER MODE until the LANGUAGE screen appears.

2. Press and release AIR.

3. Press and release POWER MODE to confirm that you want to change the language back to English.
Chapter 5: User Mode and Calibration

Overview

This section describes the GX-3R Pro in User Mode. See Table 14 below for a list of the items found in User Mode, the page that the menu item’s instructions can be found on, and a short description of the menu item.

Table 14: User Mode Menu Items

Entering User Mode

**WARNING:** The GX-3R Pro is not in operation as a gas detector while in User Mode.

1. Take the GX-3R Pro to a non-hazardous location and turn it off if it is on.
2. Press and hold AIR, then press and hold POWER MODE. When you hear a beep, release the buttons.
3. The screen that appears will depend on the setting of User Mode’s USER PASSWORD item.
   - If USER PASSWORD is set to OFF (factory setting), continue with Step 6.
   - If USER PASSWORD is set to ON, continue with Step 4.

4. If USER PASSWORD has been set to ON in User Mode, a password screen will appear. The first digit will be flashing.

* Only appears if DISP ZERO SUP is set to ON in Maintenance Mode.  
** Only appears if DISP ZERO FLWR is set to ON in Maintenance Mode.  
*** Only appears in units with a CO₂ sensor installed.
5. Use AIR to select each password number then press POWER MODE to save it and move on to the next number. To go back a number, press and hold AIR and POWER MODE for a few seconds. To reverse the direction of change (ie. from increasing to decreasing or vice versa):
   a. Press and hold AIR.
   b. Immediately press POWER MODE and then release both buttons.

6. The User Mode menu displays.

7. Use AIR to move through the User Mode menu items.

**Tips for Using User Mode**

- To scroll from one menu item to the next, press and release AIR. To reverse the scrolling direction:
  a. Press and hold AIR.
  b. Immediately press POWER/MODE and then release both buttons.
  c. The scrolling direction returns to the original direction when you exit and reenter a menu.
- To skip an item when a question is asked, press and release AIR.
- To enter an item and to save any changes, press and release POWER MODE.
- To change a flashing parameter, use AIR. To reverse the direction of change (ie. from increasing to decreasing or vice versa):
  a. Press and hold AIR.
  b. Immediately press POWER MODE and then release both buttons.
- To exit an entered menu item without saving a change, press and hold AIR and POWER MODE for a few seconds.
Performing a Bump Test (BUMP TEST)

To bump test the GX-3R Pro, you will need:

- Known calibrating samples of the gases being detected. The combustible and toxic gas samples should have concentrations between 10 and 50% of the full scale value. For example, if you are bump testing the combustible gas channel, your calibration cylinder should have a combustible gas concentration between 10% LEL and 50% LEL. An oxygen-free source, such as 100% nitrogen is recommended for setting the oxygen zero but a concentration of up to 19.5% is acceptable.

CAUTION: Although the GX-3R Pro can be bump tested with an oxygen concentration of up to 19.5%, RKI Instruments, Inc. recommends that a multi-gas cylinder have an oxygen concentration in the range of 10% - 16% oxygen.

- A 0.25 LPM fixed flow regulator
- Non-absorbent tubing
- Calibration cup

1. Confirm that the GX-3R Pro’s calibration gas values match the concentrations listed on the calibration gas cylinder(s) as described on pg.63.
2. Confirm that your cylinder selections are appropriate as described on pg.65.
3. Confirm that the regulator knob is turned all the way clockwise. Screw the 0.25 LPM fixed flow regulator onto the calibration cylinder.
4. Install the calibration cup onto the GX-3R Pro. Use the label and imprinting to make sure that the calibration cup gets installed in the correct orientation relative to the GX-3R Pro. Be sure the calibration cup is pushed on all the way.

Figure 5: Calibration Cup Installation

5. Use the tubing to connect the regulator to the inlet of the calibration cup.
6. While in User Mode, use AIR to place the cursor next to **BUMP TEST**.

7. Press and release POWER MODE. The display will show the gases assigned to Cylinder A and the assigned calibration values (see pg.63 if the calibration values do not match the calibration gas cylinder’s concentrations).

8. If necessary, use AIR to scroll to the Auto Cal screen for the gas(es) you want to calibrate. As shipped from the factory, the standard 4 gases (combustible gas, O₂, CO, and H₂S) are assigned to Cylinder A. Hydrogen-compensated CO and other toxic sensors are assigned to Cylinder D or Cylinder E.

9. Turn the regulator knob counterclockwise to open the regulator.

10. With the appropriate Auto Cal screen displayed, press and release POWER MODE.

11. The gas readings will flash, the bottom of the screen will indicate “BUMP TEST” and “APPLY GAS”, and the top of the screen will count down from the time defined in **BUMP SETTING\BUMP PARAMETER\GAS TIME**.

12. When the **BUMP SETTING\BUMP PARAMETER\AUTO CAL** User Mode menu item is set to:
   a. **OFF**, continue to Step 13.
   b. **ON**, continue to Step 14.
13. When the **BUMP SETTING\BUMP PARAMETER\AUTO CAL** User Mode menu item is set **OFF**:
   a. When the countdown is done, the instrument will indicate which channels passed or failed the bump test with a P (pass) or an F (fail) underneath the gas name. You can scroll between the bump test results and the bump test gas readings with AIR.
   
   ![Image of bump test results]

   b. To return to User Mode, press and release POWER MODE.
   c. If any channel failed the bump test, the LEDs will flash and the buzzer will sound a double pulsing tone until you press and release POWER MODE. See “Troubleshooting” on page 92.
   d. Turn the regulator knob clockwise to close the regulator.
   e. Continue to Step 15.

14. When the **BUMP SETTING\BUMP PARAMETER\AUTO CAL** User Mode menu item is set to **ON**:

   **If all channels pass the bump test:**
   a. When the countdown is done, the results screen appears. You can scroll between the bump test results and the bump test gas readings with AIR.
   
   ![Image of bump test results]

   b. To return to User Mode, press and release POWER MODE.
   c. Turn the regulator knob clockwise to close the regulator.
   d. Continue to Step 15.
If any channel fails the bump test:

a. A calibration is immediately and automatically started after the initial
   countdown. Continue to apply the calibration gas. AUTO CAL will appear at the
   bottom of the screen and a new countdown will appear at the top.

   The calibration time counted down during a calibration initiated because of a
   failed bump test is the difference between the GAS TIME and the CAL TIME
   values defined in the BUMP SETTING/BUMP PARAMETER menu item in
   User Mode.

b. At the end of the calibration, the instrument displays the results from both the
   bump test and the calibration. Use AIR to scroll between the calibration/bump
   test results, the bump test gas readings, and the calibration gas readings.

c. To return to User Mode, press and release POWER MODE.

d. If any channel failed the calibration, the LEDs will flash and the buzzer will
   sound a double pulsing tone until you press and release POWER MODE. See
   “Troubleshooting” on page 92.

e. Turn the regulator knob clockwise to close the regulator.

f. Continue to Step 15.

15. Unscrew the regulator from the calibration cylinder.
16. If necessary, repeat Step 1 though Step 15 for additional cylinders.
17. Remove the calibration cup from the GX-3R Pro.
18. Store the calibration kit in a safe and convenient place.
Performing a Calibration (GAS CAL)

Calibration Notes

- To fully calibrate the standard 4 (combustible gas, O₂, CO, H₂S) and super toxic sensors, you must do a fresh air adjustment (AIR CAL) and a span adjustment (AUTO CAL).

- To fully calibration the IR CO₂ sensor, you must do either a) a fresh air adjustment (AIR CAL) and a span adjustment (AUTO CAL) or b) a zero adjustment (CO₂ ZERO CAL) and a span adjustment (AUTO CAL).

- The optimum frequency of calibration depends heavily on how the GX-3R Pro is used. Instruments used daily may need to be calibrated weekly or monthly, while instruments that are used only a few times a year may need to be calibrated before each use. Typical calibration frequencies range from monthly to quarterly.

Performing a Fresh Air Adjustment (AIR CAL)

1. Find a fresh air environment, an environment of normal oxygen content (20.9%) that is free of toxic and combustible gases.

2. While in User Mode, use AIR to place the cursor next to GAS CAL.

4. Use AIR to place the cursor next to AIR CAL.

5. Press and release POWER MODE. The example below shows the standard 4 sensors (combustible gas, O₂, CO, H₂S).
6. Press and hold AIR until the screen prompts you to release it.

7. If the fresh air adjustment passes, the instrument returns to the Gas Cal menu.

8. If the fresh air adjustment fails, “FAIL AIR” displays. Press and release POWER MODE to acknowledge the failure. See “Troubleshooting” on page 92.

**Performing a Zero Adjustment on the CO₂ Sensor (CO₂ ZERO CAL)**

Performing a zero adjustment on the CO₂ sensor sets the sensor’s zero to a known concentration of CO₂ (0 ppm or 0%).

**Preparing for a CO₂ ZERO CAL**

To set the zero reading on the CO₂ sensor, you will need:

- 100% nitrogen (N₂) cylinder
- 0.25 LPM fixed flow regulator
- Non-absorbent tubing
- Calibration cup

1. Confirm that the regulator knob is turned all the way clockwise. Screw the 0.25 LPM fixed flow regulator onto the calibration cylinder.

2. Install the calibration cup onto the GX-3R Pro. Use the label and imprinting to make sure that the calibration cup gets installed in the correct orientation relative to the GX-3R Pro. Be sure the calibration cup is pushed on all the way.

![Figure 6: Calibration Cup Installation](image-url)
3. Use the tubing to connect the regulator to the inlet of the calibration cup.

**Performing a CO2 ZERO CAL**

1. While in User Mode, use AIR to place the cursor next to GAS CAL.

2. Press and release POWER MODE. The Gas Cal menu appears.

3. Use AIR to place the cursor next to CO2 ZERO CAL.

4. Press and release POWER MODE.

5. The CO2 gas reading will flash and the bottom of the screen will indicate “CO2 ZERO CAL” and “APPLY GAS”.

6. Turn the regulator knob counterclockwise to open the regulator.

7. Allow the gas to flow for 2 minutes.

8. Press and release POWER MODE.

9. Turn the regulator knob clockwise to close the regulator.

10. If the zero adjustment passed the screen says “PASS” and the instrument returns to the Gas Cal menu.
11. If the zero adjustment failed:
   a. “FAIL” will replace the gas reading.
   b. The LEDs will flash and the buzzer will sound a double pulsing tone.
   c. Press and release POWER MODE to clear the failure. The instrument returns to the GAS CAL menu.
   d. See “Troubleshooting” on page 92.
12. Unscrew the regulator from the calibration cylinder.
13. Remove the calibration cup from the GX-3R Pro.
14. Store the calibration kit in a safe and convenient place.
15. Use AIR to place the cursor next to ESCAPE.
16. Press and release POWER MODE. The instrument will return to User Mode.

**Performing a Span Adjustment in AUTO CAL**

**Preparing for a Span Adjustment**

To perform a span adjustment on the GX-3R Pro, you will need:

- Known concentrations of the gases being detected. The combustible and toxic gas samples should have concentrations between 10 and 50% of the full scale value. For example, if you are calibrating the combustible gas channel, your calibration cylinder should have a combustible gas concentration between 10% LEL and 50% LEL. An oxygen-free source, such as 100% nitrogen is recommended for setting the oxygen zero but a concentration of up to 19.5% is acceptable.

**CAUTION:** Although the GX-3R Pro can be calibrated with an oxygen concentration of up to 19.5%, RKI Instruments, Inc. recommends that a multi-gas cylinder have an oxygen concentration in the range of 10% - 16% oxygen.

- 0.25 LPM fixed flow regulator
- Non-absorbent tubing
- Calibration cup

1. Confirm that the GX-3R Pro’s calibration gas values match the concentrations listed on the calibration gas cylinder(s) as described on pg.63.
2. Confirm that your cylinder selections are appropriate as described on pg.65.
3. Confirm that the regulator knob is turned all the way clockwise. Screw the 0.25 LPM fixed flow regulator onto the calibration cylinder.
4. Install the calibration cup onto the GX-3R Pro. Use the label and imprinting to make sure that the calibration cup gets installed in the correct orientation relative to the GX-3R Pro. Be sure the calibration cup is pushed on all the way.

![Figure 7: Calibration Cup Installation](image)

5. Use the tubing to connect the regulator to the inlet of the calibration cup.

*Performing a Span Adjustment*

1. While in User Mode, use AIR to place the cursor next to **GAS CAL**.

   ![User Mode Menu](image)

2. Press and release POWER MODE. The Gas Cal menu appears.
3. Use AIR to place the cursor next to **AUTO CAL**.
4. Press and release POWER MODE. The display will show the gases assigned to Cylinder A and the assigned calibration values (see pg.63 if the calibration values do not match the calibration gas cylinder’s concentrations).

5. If necessary, use AIR to scroll to the Auto Cal screen for the gas(es) you want to calibrate. As shipped from the factory, the standard 4 gases (combustible gas, \(O_2\), CO, and \(H_2S\)) are assigned to Cylinder A. Hydrogen-compensated CO and other toxic sensors are assigned to Cylinder D or Cylinder E.

6. Press and release POWER MODE.

7. The gas readings will flash and the bottom of the screen will indicate “AUTO CAL” and “APPLY GAS”.

8. Turn the regulator knob counterclockwise to open the regulator.

9. Allow the gas to flow for 2 minutes.

10. Press and release POWER MODE.

11. Turn the regulator knob clockwise to close the regulator.

12. If the calibration passed:
   a. The screen says “PASS”, shows the current gas readings, and the instrument returns to the Gas Cal menu.
   b. If **DISP MAX SPAN** is set to **ON** in Gas Select Mode (see pg.150), then before returning to the Gas Cal menu, the instrument will indicate the maximum possible adjustment it could have made to the response reading. So if the combustible gas channel was calibrated with 50% LEL gas and the maximum indicated span is 95% LEL, this means that there was enough adjustment left on that channel to set the reading to 95% LEL when the detector was exposed to 50% LEL gas. If the maximum span value is close to the calibration gas value, for example if it is 53% LEL when exposed to 50% LEL gas, the sensor should be replaced soon. The upper limit on the maximum adjustment indicated for all channels except for oxygen is either twice the calibration value or full scale, whichever is lower. The upper limit on the maximum adjustment indicated for the oxygen channel is 25.0% volume.
13. If the calibration failed:
   a. “FAIL” will replace the gas reading for the failed sensors.
   b. The LEDs will flash and the buzzer will sound a double pulsing tone.
   c. Press and release POWER MODE to clear the failure. The instrument returns to
      the GAS CAL menu.
   d. See “Troubleshooting” on page 92.

14. Unscrew the regulator from the calibration cylinder.
15. If necessary, repeat Step 1 through Step 14 for additional cylinders.
16. Remove the calibration cup from the GX-3R Pro.
17. Store the calibration kit in a safe and convenient place.
18. Use AIR to place the cursor next to ESCAPE.
19. Press and release POWER MODE. The instrument will return to User Mode.

**Setting the Calibration Values in SETTING CAL--P**

1. While in User Mode, use AIR to place the cursor next to GAS CAL.

2. Press and release POWER MODE. The Gas Cal menu appears.

3. Use AIR to place the cursor next to AUTO CAL.

4. Press and release POWER MODE. The Auto Cal screen for gases assigned to
   Cylinder A will display.
5. Use AIR to scroll to **SETTING CAL--P**.

6. Press and release POWER MODE. The combustible gas channel will display.

7. Use AIR to scroll to the channel whose calibration gas value you want to change.
8. Press and release POWER MODE. The calibration gas value will begin to flash. In the example below, the combustible gas channel is selected.

<table>
<thead>
<tr>
<th>CH4</th>
<th>%LEL</th>
</tr>
</thead>
<tbody>
<tr>
<td>50</td>
<td></td>
</tr>
</tbody>
</table>

9. Use AIR to adjust the calibration gas value. The calibration gas value in the instrument must match the value listed on the calibration gas cylinder you are using for that channel.

**NOTE:** If you are using an RKI 4-gas cylinder, be sure to set the O2 channel to 12%, not 0%.

10. Press and release POWER MODE to save the change. The calibration gas value stops flashing and the unit returns to the channel selection screen.

11. Repeat Step 7 through Step 10 for any other channels that need to be changed.

12. Use AIR to place the cursor next to ESCAPE.

13. Press and release POWER MODE. The instrument will return to the SETTING CAL--P menu item in the Auto Cal Menu.

14. Use AIR to place the cursor next to ESCAPE.

15. Press and release POWER MODE. The instrument will return to the GAS CAL menu.

16. Use AIR to place the cursor next to ESCAPE.

17. Press and release POWER MODE. The instrument will return to User Mode.

**Making Cylinder Selections in CYL SETTING**

The CYL SETTING menu item allows you to group gases together for calibration. As shipped from the factory, the standard 4 gases (combustible gas, O2, H2S, CO) are assigned to Cylinder A which means all 4 gases are calibrated at once. As shipped from the factory, the hydrogen-compensated CO and toxic gases are assigned to Cylinder D or Cylinder E. There are 5 cylinder assignments available: A, B, C, D, and E. If you want to calibrate each gas separately, you need to assign each gas to a different cylinder (i.e. Cylinder A: combustible gas, Cylinder B: O2, Cylinder C: H2S, Cylinder D: CO, Cylinder E: CO2).

1. While in User Mode, use AIR to place the cursor next to GAS CAL.
2. Press and release POWER MODE. The Gas Cal menu appears.

3. Use AIR to place the cursor next to AUTO CAL.

4. Press and release POWER MODE. The Auto Cal screen for gases assigned to Cylinder A will display.

5. Use AIR to scroll to CYL SETTING.

6. Press and release POWER MODE. The combustible gas channel will display.
7. Use AIR to scroll to the channel whose cylinder assignment you want to change.

8. Press and release POWER MODE. The current setting will flash. In the example below, the combustible gas channel is selected.

9. Use AIR to change the cylinder assignment. The choices are A, B, C, D, and E.

10. Press and release POWER MODE to save the change. The cylinder assignment stops flashing and the unit returns to the channel selection screen.

11. Repeat Step 7 through Step 10 for any other channels that need to be changed.

12. Use AIR to place the cursor next to ESCAPE.

13. Press and release POWER MODE. The instrument will return to the CYL SETTING menu item in the Auto Cal Menu.

14. Use AIR to place the cursor next to ESCAPE.

15. Press and release POWER MODE to return to the GAS CAL menu.
16. Use AIR to place the cursor next to **ESCAPE**.
17. Press and release POWER MODE. The instrument will return to User Mode.

### Setting Calibration Parameters (CAL SETTING)

The **CAL SETTING** menu item has a sub menu with 5 menu items: **CAL REMINDER**, **CAL INTERVAL**, **CAL EXPIRED**, **CAL CHECK GAS**, and **ESCAPE**.

1. While in User Mode, use AIR to place the cursor next to **CAL SETTING**.

2. Press and release POWER MODE. The **CAL SETTING** menu appears.

   ![CAL SETTING Menu]

   1. While in the **CAL SETTING** menu, use AIR to place the cursor next to **CAL REMINDER**.

   2. Press and release POWER MODE. The current setting flashes.

   3. Use AIR to display the desired setting.

   4. Press and release POWER MODE to save the setting and return to the **CAL SETTING** menu.

### CAL REMINDER

**ON** (factory setting): The GX-3R Pro will give an indication at start up if it is due for calibration. The type of indication will depend on the **CAL EXPIRED** setting (see pg.69).

**OFF**: The GX-3R Pro will not give an indication at start up if it is due for calibration.

1. While in the **CAL SETTING** menu, use AIR to place the cursor next to **CAL REMINDER**.

   ![CAL REMINDER Menu]

   2. Press and release POWER MODE. The current setting flashes.

   3. Use AIR to display the desired setting.

   4. Press and release POWER MODE to save the setting and return to the **CAL SETTING** menu.
CAL INTERVAL

This setting defines the amount of time between calibrations. The time can be set in 1 day increments. The minimum setting is 1 day and the maximum setting is 1000 days. The factory setting is 90 days.

1. While in the CAL SETTING menu, use AIR to place the cursor next to CAL INTERVAL.

2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to the CAL SETTING menu.

CAL EXPIRED

This item defines what indication is given during start up when calibration is due and CAL REMINDER is set to ON.

CONFIRM TO USE (factory setting): The GX-3R Pro will give an indication at start up if calibration is past due and will require the user to decide whether to perform a calibration or continue and use the GX-3R Pro without calibrating. Press and release AIR to continue without calibrating or POWER MODE to perform a calibration.

CANNOT USE: If the unit is due for calibration, the GX-3R Pro will give an indication at start up that calibration is past due and will prompt you to press and release POWER MODE to enter User Mode and perform a calibration. Pressing AIR will have no effect. A successful calibration must be performed in order to use the instrument.

NO EFFECT: The GX-3R Pro will give an indication at startup that calibration is past due. If desired, POWER MODE can be pressed to perform a calibration but it is not necessary to acknowledge the calibration due indication. The warm-up sequence will continue on its own.

1. While in the CAL SETTING menu, use AIR to place the cursor next to CAL EXPIRED.

2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to the **CAL SETTING** menu.

**CAL CHECK GAS**

**ALL GAS** (factory setting): Calibration dates for all gases are used to determine if calibration is due.

**4 GAS**: Calibration dates for only the standard 4 gases (combustible gas/O₂/H₂S/CO) are used to determine if calibration is due.

1. While in the **CAL SETTING** menu, use AIR to place the cursor next to **CAL CHECK GAS**.

2. Press and release POWER MODE. The current setting flashes.

3. Use AIR to display the desired setting.

4. Press and release POWER MODE to save the setting and return to the **CAL SETTING** menu.

**ESCAPE**

1. While in the **CAL SETTING** menu, use AIR to place the cursor next to **ESCAPE**.

2. Press and release POWER MODE. The instrument will return to User Mode.

---

### Setting Bump Test Parameters (BUMP SETTING)

The **BUMP SETTING** menu item has a sub menu with 6 menu items: **BUMP PARAMETERS**, **BUMP REMINDER**, **BUMP INTERVAL**, **BUMP EXPIRED**, **BUMP CHECK GAS**, and **ESCAPE**.

1. While in User Mode, use AIR to place the cursor next to **BUMP SETTING**.

2. Press and release POWER MODE. The **BUMP SETTING** menu appears.
BUMP PARAMETER

The **BUMP PARAMETER** menu item has its own sub-menu with 5 menu items: **GAS TIME**, **TOLERANCE**, **CAL TIME**, **AUTO CAL**, and **ESCAPE**.

1. While in the **BUMP SETTING** menu, use AIR to place the cursor next to **BUMP PARAMETER**.

   ![Menu Selection](image)

   2. Press and release POWER MODE. The **BUMP PARAMETER** menu appears.

**GAS TIME**

The **GAS TIME** is the amount of time that the instrument is exposed to gas during a bump test. The available choices are 30 seconds (factory setting), 45 seconds, 60 seconds, and 90 seconds.

1. While in the **BUMP PARAMETER** menu, use AIR to place the cursor next to **GAS TIME**.

   ![Menu Selection](image)

   2. Press and release POWER MODE. The current setting flashes.
   3. Use AIR to display the desired setting.
   4. Press and release POWER MODE to save the setting and return to the **BUMP PARAMETER** menu.

**TOLERANCE**

**TOLERANCE** is the bump test tolerance value and is represented as a percentage of the calibration gas concentration. It is the percentage that the bump test reading can differ from the actual gas concentration. If the bump test reading differs more, the bump test will fail. The available values are 10%, 20%, 30%, 40%, and 50% (factory setting).

1. While in the **BUMP PARAMETER** menu, use AIR to place the cursor next to **TOLERANCE**.

   ![Menu Selection](image)
2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to the BUMP PARAMETER menu.

**CAL TIME**

The CAL TIME is the total time the instrument is exposed to calibration gas when a bump test fails if AUTO CAL is set to ON. The bump test time is deducted from the calibration time. For example, if the CAL TIME is set to 90 seconds and the GAS TIME is set to 30 seconds, if the bump test fails, the GX-3R Pro will only be exposed to gas for an additional 60 seconds. The available values are 90 seconds (factory setting), and 120 seconds.

1. While in the BUMP PARAMETER menu, use AIR to place the cursor next to CAL TIME.

2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to the BUMP PARAMETER menu.

**AUTO CAL**

ON (factory setting): If a bump test fails, the unit will automatically begin a calibration. 
OFF: If a bump test fails, the unit will not automatically begin a calibration.

1. While in the BUMP PARAMETER menu, use AIR to place the cursor next to AUTO CAL.

2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to the BUMP PARAMETER menu.
1. While in the **BUMP PARAMETER** menu, use AIR to place the cursor next to **ESCAPE**.

2. Press and release POWER MODE. The instrument will return to the **BUMP PARAMETER** menu.

**BUMP REMINDER**

**ON**: The GX-3R Pro will give an indication at start up if it is due for bump testing. The type of indication will depend on the **BUMP EXPIRED** setting (see pg. 74).

**OFF** (factory setting): The GX-3R Pro will not give an indication at start up if it is due for bump testing.

1. While in the **BUMP SETTING** menu, use AIR to place the cursor next to **BUMP REMINDER**.
2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to the **BUMP SETTING** menu.

**BUMP INTERVAL**

This setting defines the amount of time between bump tests. The time can be set in 1 day increments. The minimum setting is 0 days and the maximum setting is 30 days. The factory setting is 30 days.

1. While in the **BUMP SETTING** menu, use AIR to place the cursor next to **BUMP INTERVAL**.
2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to the **BUMP SETTING** menu.

**BUMP EXPIRED**

This item defines what indication is given during start up when a bump test is due and **BUMP REMINDER** is set to **ON**.

**CONFIRM TO USE** (factory setting): The GX-3R Pro will give an indication at start up if a bump test is past due and will require the user to decide whether to perform a bump test or continue and use the GX-3R Pro without bump testing. Press and release AIR to continue without bump testing or POWER MODE to perform a bump test.

**CANNOT USE**: If the unit is due for bump testing, the GX-3R Pro will give an indication at start up that a bump test is past due and will prompt you to press and release POWER MODE to enter User Mode and perform a bump test. Pressing AIR will have no effect. A successful bump test must be performed in order to use the instrument.

**NO EFFECT**: The GX-3R Pro will give an indication at startup that a bump test is past due. If desired, POWER MODE can be pressed to perform a bump test but it is not necessary to acknowledge the bump test due indication. The warm-up sequence will continue on its own.

1. While in the **BUMP SETTING** menu, use AIR to place the cursor next to **BUMP EXPIRED**.

   ![Menu Screen](image)

2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to the **BUMP SETTING** menu.

**BUMP CHECK GAS**

**ALL GAS** (factory setting): Bump test dates for all gases are used to determine if bump test is due.

**4 GAS**: Bump test dates for only the standard 4 gases (combustible gas/O₂/H₂S/CO) are used to determine if bump test is due.

1. While in the **BUMP SETTING** menu, use AIR to place the cursor next to **BUMP CHECK GAS**.

   ![Menu Screen](image)
2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to the BUMP SETTING menu.

**ESCAPE**
1. While in the BUMP SETTING menu, use AIR to place the cursor next to ESCAPE.

```
MAINT  7:49
BUMP EXPIRED
BUMP CHECK GAS
> ESCAPE
BUMP SETTING
```

2. Press and release POWER MODE. The instrument will return to User Mode.

---

**Adjusting Man Down and Panic Settings (MAN DOWN)**

The MAN DOWN menu item in User Mode has a sub menu with 4 menu items: MAN DOWN, PANIC, MAN DOWN TIME, and ESCAPE.

1. While in User Mode, use AIR to place the cursor next to MAN DOWN.

```
MAINT  7:49
BUMP SETTING
> MAN DOWN
ALARM SETTING
USER MODE
```

2. Press and release POWER MODE. The MAN DOWN menu appears.

```
> MAN DOWN
PANIC
MAN DOWN TIME
MAN DOWN MENU
```
Turning Man Down On/Off

**ON**: The Man Down alarm can be triggered if the instrument detects no motion for the period of time defined in **WARNING 1 TIME**, **WARNING 2 TIME**, and **ALARM TIME** below.

**OFF** (factory setting): The Man Down alarm cannot be triggered.

1. While in the **MAN DOWN** menu, use AIR to place the cursor next to **MAN DOWN**.

2. Press and release **POWER MODE**. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release **POWER MODE** to save the setting and return to the **MAN DOWN** menu.

Turning Panic On/Off

**ON** (factory setting): A Panic Alarm can be initiated by firmly tapping the instrument twice in a row.

**OFF**: A Panic Alarm cannot be initiated.

1. While in the **MAN DOWN** menu, use AIR to place the cursor next to **PANIC**.

2. Press and release **POWER MODE**. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release **POWER MODE** to save the setting and return to the **MAN DOWN** menu.
Setting the Man Down Warning/Alarm Times (MAN DOWN TIME)

The Man Down Warning/Alarm times are the amount of time that has to pass between a Man Down detection and each warning/alarm. It can be set in 1 second increments from 10 - 120 seconds. The factory setting is 60 seconds. When setting the Man Down Warning/Alarm times, keep in mind that ALARM TIME ≥ WARNING 2 TIME ≥ WARNING 1 TIME.

Table 15: Man Down Warning Alarm Time Factory Settings

<table>
<thead>
<tr>
<th>Warning/Alarm</th>
<th>Factory Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>WARNING 1 TIME</td>
<td>60 seconds</td>
</tr>
<tr>
<td>WARNING 2 TIME</td>
<td>75 seconds</td>
</tr>
<tr>
<td>ALARM TIME</td>
<td>90 seconds</td>
</tr>
</tbody>
</table>

1. While in the MAN DOWN menu, use AIR to place the cursor next to MAN DOWN TIME.

2. Press and release POWER MODE. The current setting for the WARNING 1 TIME will flash.

3. Use AIR to adjust the WARNING 1 TIME.

4. Press and release POWER MODE to save the setting.

5. Repeat Step 3 and Step 4 for the WARNING 2 TIME and ALARM TIME settings.

6. The instrument will return to the MAN DOWN menu.
ESCAPE
1. While in the MAN DOWN menu, press AIR to scroll to ESCAPE.
2. Press and release POWER MODE. The instrument will return to User Mode.

Alarm Settings (ALARM SETTING)

In the Alarm Settings menu item, you can change the alarm points and default the alarm points back to their factory settings.
1. While in User Mode, use AIR to place the cursor next to ALARM SETTING.

2. Press and release POWER MODE. The first channel is displayed.
Setting the Alarm Points

1. While in the **ALARM SETTING** menu, press AIR to scroll through to the instrument channel whose alarm points you want to change.

2. Press and release POWER MODE.
3. The Warning setpoint for the channel will display and it will be flashing. In the example below, the CO channel is selected.

<table>
<thead>
<tr>
<th>Channel</th>
<th>Setpoint</th>
</tr>
</thead>
<tbody>
<tr>
<td>CO</td>
<td>25 ppm</td>
</tr>
<tr>
<td></td>
<td>50 ppm</td>
</tr>
<tr>
<td></td>
<td>1200 ppm</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4. Use AIR to adjust the Warning setpoint.

5. Press and release POWER MODE to save the setting.

6. Repeat Step 4 and Step 5 for the Alarm, Alarm H, STEL (CO, H₂S, CO₂, and super toxic only) and TWA (CO, H₂S, CO₂, and super toxic only) settings.

7. The instrument will return to the ALARM SETTING menu.

8. Repeat Step 1 - Step 7 to change the alarm points for other channels.
Defaulting the Alarm Points

Defaulting the alarm points defaults them back to factory settings as outlined in Table 1 on page 8 or to the settings saved in the SET DEF ALM-P menu item in Gas Select Mode if you have performed a SET DEF ALM-P operation.

1. While in the ALARM SETTING menu, press AIR to scroll to DEFAULT ALM--P.

2. Press POWER MODE to enter the DEFAULT ALM--P menu item.

3. Press POWER MODE to perform an alarm default. Press AIR to return to the DEFAULT ALM--P menu item.

4. The instrument will ask if you’re sure you want to default the alarm points. Press POWER MODE to default the alarm points. Press AIR to return to the ALARM SETTING menu.

ESCAPE

1. While in the ALARM SETTING menu, press AIR to scroll to ESCAPE.

2. Press and release POWER MODE. The instrument will return to User Mode.

Updating the Lunch Break Setting (LUNCH BREAK)

OFF (factory setting): The GX-3R Pro automatically starts new TWA and PEAK reading collection and resets the time in operation at startup.

ON: The Lunch Break Screen displays during startup. From this screen, you can choose to continue accumulating TWA and PEAK readings and the time in operation from the last time the GX-3R Pro was used or start collecting new readings and reset the time in operation.

1. While in User Mode, use AIR to place the cursor next to LUNCH BREAK.

2. Press and release POWER MODE. The current setting flashes.

3. Use AIR to display the desired setting.

4. Press and release POWER MODE to save the setting and return to User Mode.
Setting the Confirmation Beep and Non-Compliance Indicator (CONFIRMATION)

The CONFIRMATION menu item has a sub menu with 3 menu items: BEEP SELECT, BEEP INTERVAL, and ESCAPE.

1. While in User Mode, use AIR to place the cursor next to CONFIRMATION.

2. Press and release POWER MODE to enter the Confirmation Menu.

BEEP SELECT

BEEP SELECT defines what kind of confirmation or non-compliance indication you want to occur in Measuring Mode. The available choices are:

OFF (factory setting): The GX-3R Pro does not provide a confirmation alert or non-compliance indicator.

LED: The GX-3R Pro’s LEDs double flash as often as defined by the BEEP INTERVAL parameter to verify that the instrument is operating.

BUZZER: The GX-3R Pro’s buzzer double beeps as often as defined by the BEEP INTERVAL parameter to verify that the instrument is operating.

LED+BUZZER: The GX-3R Pro’s LEDs double flash and the buzzer double beeps as often as defined by the BEEP INTERVAL parameter to verify that the instrument is operating.

BUMP/CAL: If a bump test or a calibration is due and if BUMP EXPIRED or CAL EXPIRED is set to CONFIRM TO USE or NO EFFECT, the GX-3R Pro’s LEDs double flash as often as defined by the BEEP INTERVAL parameter to indicate a non-compliance. Once a bump test or calibration (depending on which is due) is done, the LEDs will stop flashing.

ALARM ALERT: If the instrument goes into any gas alarm, the LEDs double flash as often as defined by the BEEP INTERVAL parameter to indicate a non-compliance. Once a successful bump test or calibration is done, the LEDs will stop flashing.

NOTE: Depending on the Need to get Bump Log setting (only accessed via SDM-3R program), a data download may also be needed to clear the non-compliance.
**BUMP/CAL/ALARM**: The LEDs double flash to indicate a non-compliance if any of the following happens.

a. **BUMP EXPIRED** is set to **CONFIRM TO USE** or **NO EFFECT** and a bump test is due (cleared by successful bump test).

b. **CAL EXPIRED** is set to **CONFIRM TO USE** or **NO EFFECT** and a calibration is due (cleared by successful calibration).

c. The instrument goes into any gas alarm (cleared by successful bump test or calibration).

**NOTE**: Depending on the **Need to get Bump Log** setting (only accessed via SDM-3R program), a data download may also be needed to clear the gas alarm non-compliance.

1. While in the **CONFIRMATION** menu, use AIR to place the cursor next to **BEEP SELECT**.

2. Press and release **POWER MODE**. The current setting flashes.

3. Use AIR to display the desired setting.

4. Press and release **POWER MODE** to save the setting and return to the Confirmation Menu.

**BEEP INTERVAL**

The **BEEP INTERVAL** parameter defines how often the confirmation alert or non-compliance indicator selected in **BEEP SELECT** occurs. This setting only applies if the **BEEP SELECT** parameter is set to something other than **OFF**. The available choices are **0.5** minutes and **1-99** minutes in 1 minute increments. The factory setting is **5** minutes.

1. While in the **CONFIRMATION** menu, use AIR to place the cursor next to **BEEP INTERVAL**.

2. Press and release **POWER MODE**. The current setting flashes.

3. Use AIR to display the desired setting.

4. Press and release **POWER MODE** to save the setting and return to the Confirmation Menu.
ESCAPE
1. While in the CONFIRMATION menu, use AIR to place the cursor next to ESCAPE.
2. Press and release POWER MODE. The instrument will return to User Mode.

Auto Backlight in Low Light (AUTO BACKLIGHT)

The GX-3R Pro has a luminescence sensor that allows the instrument to detect how bright an environment is.

ON (factory setting): The instrument’s backlight automatically turns on in a low light environment.

OFF: The instrument’s backlight will not automatically turn on in a low light environment.

1. While in User Mode, use AIR to place the cursor next to AUTO BACKLIGHT.
2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to User Mode.

Updating the Backlight Time (BACKLIGHT TIME)

This setting indicates the length of time the LCD illuminates when you press any button. The minimum setting is OFF; the maximum setting is 255 seconds. The factory setting is 30 seconds.

1. While in User Mode, use AIR to place the cursor next to BACKLIGHT TIME.
2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to User Mode.
Turning the Key Tone On/Off (KEY TONE)

**ON** (factory setting): The instrument will beep every time a button is pressed.

**OFF**: The instrument will not beep when a button is pressed.

1. While in User Mode, use AIR to place the cursor next to **KEY TONE**.

2. Press and release POWER MODE. The current setting flashes.

3. Use AIR to display the desired setting.

4. Press and release POWER MODE to save the setting and return to User Mode.

Display Mode Items (D MODE SETTING)

**OFF**: LIST, USER ID, STATION ID, INVERT SELECT, LCD BACKGROUND, BLUETOOTH, BUZZER VOLUME, and LANGUAGE items do not appear in Display Mode.

**ON** (factory setting): LIST, INVERT SELECT, LCD BACKGROUND, BLUETOOTH, BUZZER VOLUME, and LANGUAGE items appear in Display Mode. USER ID and STATION ID screens appear in Display Mode if **ID DISPLAY** in Maintenance Mode is also set to **ON** (factory setting is **OFF**).

1. While in User Mode, use AIR to place the cursor next to **D MODE SETTING**.

2. Press and release POWER MODE. The current setting flashes.

3. Use AIR to display the desired setting.

4. Press and release POWER MODE to save the setting and return to User Mode.
Turning Zero Suppression On/Off (ZERO SUPPRESS)

This menu item only appears if DISP ZERO SUP is set to ON in Maintenance Mode. The ZERO SUPPRESS setting is not intended for field adjustment. The default setting for each sensor is ON.

<table>
<thead>
<tr>
<th>Sensor</th>
<th>Zero Suppression Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Combustible Gas</td>
<td>2% LEL</td>
</tr>
<tr>
<td>O₂</td>
<td>0.5% volume</td>
</tr>
<tr>
<td>H₂S</td>
<td>0.3 ppm</td>
</tr>
<tr>
<td>CO</td>
<td>2 ppm</td>
</tr>
<tr>
<td>CO₂</td>
<td>0 ppm</td>
</tr>
<tr>
<td>SO₂</td>
<td>0.20 ppm</td>
</tr>
</tbody>
</table>

Turning Zero Follower On/Off (ZERO FOLLOWER)

This menu item only appears if DISP ZERO FLWR is set to ON in Maintenance Mode. The ZERO FOLLOWER setting is not intended for field adjustment. The oxygen channel does not support zero follower functionality. The default setting is ON for all channels.

Reading Units for IR Sensor (IR UNIT SELECT)

This menu item only appears if a CO₂ sensor is installed. IR UNIT SELECT changes the IR sensor’s units.

vol%: CO₂ readings displayed in percent volume

ppm: CO₂ readings displayed in parts per million

1. While in User Mode, use AIR to place the cursor next to IR UNIT SELECT.

2. Press and release POWER MODE. The current setting flashes.

3. Use AIR to display the desired setting.

4. Press and release POWER MODE to save the setting and return to User Mode.
CO₂ Fresh Air Adjustment On/Off (CO2AIR SETTING)

This menu item only appears if a CO₂ sensor is installed.

**ON**: CO₂ channel is set to 400 ppm (0.04% volume) when performing a demand zero, auto zero, or AIR CAL.

**OFF** (factory setting): CO₂ channel is not adjusted during a demand zero, auto zero, or AIR CAL.

1. While in User Mode, use AIR to place the cursor next to CO2AIR SETTING.

2. Press and release POWER MODE. The current setting flashes.

3. Use AIR to display the desired setting.

4. Press and release POWER MODE to save the setting and return to User Mode.

Setting the Date/Time (DATE)

1. From the main menu, use AIR to place the cursor next to DATE.

2. Press and release POWER MODE. The date and time will be displayed with the year flashing.

3. Use AIR to display the desired year.

4. Press and release POWER MODE to save the setting. The month setting flashes.

5. Repeat Step 3 and Step 4 to enter the month, day, hours, and minutes settings. The date and time will be saved and the instrument will return to User Mode.
Setting the Date Format (DATE FORMAT)

**MM/DD/YYYY** (factory setting): month/day/year.

**YYYY/MM/DD**: year, month, day.

**DD/MM/YYYY**: day, month, year.

1. While in User Mode, use AIR to place the cursor next to **DATE FORMAT**.

2. Press and release **POWER MODE**. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release **POWER MODE** to save the setting and return to User Mode.

Changing the Instrument Language (LANGUAGE)

The available languages for the GX-3R Pro are: English (factory setting), Japanese, Italian, Spanish, German, French, Portuguese, Russian, Korean, and Chinese (TC).

If you change the language to anything other than English, the **LANGUAGE** screen will appear in Display Mode, allowing you to change the instrument language back to English.

1. While in User Mode, use AIR to place the cursor next to **LANGUAGE**.

2. Press and release **POWER MODE**. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release **POWER MODE** to save the setting and return to User Mode.
Turning the Password On/Off (USER PASSWORD)

**ON**: The GX-3R Pro prompts you for a password when you enter User Mode. The factory-set password is **0405** but it can be changed as desired.

**OFF** *(factory setting)*: No password is required to enter User Mode.

1. While in User Mode, use AIR to place the cursor next to **USER PASSWORD**.

2. Press and release POWER MODE. The current setting flashes.

3. Use AIR to display the desired setting.

4. If you selected **OFF**, press and release POWER MODE to save the setting and return to the **USER PASSWORD** item in User Mode.

   If you selected **ON**, continue with Step 5.

5. Press and release POWER MODE. The Set Password Screen appears. The current password is at the top of the screen with the first digit flashing.

   ![Set Password Screen](image)

6. Use AIR to display a number from 0 to 9.

7. Press and release POWER MODE to enter the selection and advance to the next number. To go back a number, press and hold AIR and POWER MODE for a few seconds.

8. Repeat Step 6 and Step 7 to select the remaining numbers. When you press and release POWER MODE to enter the last number, the password is saved and you return to User Mode.
Viewing the ROM/SUM (ROM/SUM)

The ROM/SUM screen shows the firmware version that is loaded in the instrument and the firmware checksum.

1. While in User Mode, use AIR to place the cursor next to ROM/SUM.

2. Press and release POWER MODE. The screen will cycle through the ROM/SUM of the main board, the ROM/SUM of the sensor board, the ROM/SUM of the IR sensor (if an IR sensor is installed), and the Bluetooth version. The ROM is the top value and the SUM is the bottom value.

3. Press and release POWER MODE to return to User Mode.

Viewing the Radio Standards (RADIO STANDARD)

1. While in User Mode, use AIR to place the cursor next to RADIO STANDARD.
2. Press and release POWER MODE. The radio standards display.

3. Press and release POWER MODE to return to User Mode.

**Returning to Measuring Mode (START MEASURE)**

1. While in User Mode, use AIR to place the cursor next to **START MEASURE**.

2. Press and release POWER MODE.

3. The instrument will begin its start-up sequence.
Chapter 6: Maintenance

Overview

This chapter describes troubleshooting procedures for the GX-3R Pro. It also includes procedures for replacing and recharging the batteries and replacing various consumable parts.

WARNING: RKI Instruments, Inc. recommends that service, calibration, and repair of RKI Instruments be performed by personnel properly trained for this work. Replacing sensors and other parts with original equipment does not affect the intrinsic safety of the instrument.

Troubleshooting

The troubleshooting table describes error messages, symptoms, probable causes, and recommended action for problems you may encounter with the GX-3R Pro.

Table 16: Troubleshooting the GX-3R Pro

<table>
<thead>
<tr>
<th>Symptoms</th>
<th>Probable Causes</th>
<th>Recommended Action</th>
</tr>
</thead>
</table>
| • The LCD is blank. | • The unit may have been turned off.  
• The batteries may need to be recharged. | 1. To turn on the unit, press and briefly hold POWER MODE.  
2. If the unit does not turn on, recharge the batteries.  
3. If the difficulties continue, contact RKI Instruments, Inc. for further instruction. |
| • The LCD shows abnormally high or low readings but other gas detection instruments do not. | • One of the sensor’s filters may need to be replaced.  
• The GX-3R Pro may need to be recalibrated.  
• The sensor for the affected channel(s) may need replacement. | 1. Replace the sensor filter.  
2. Recalibrate the unit.  
3. If the difficulties continue, replace the sensor for the affected channel(s) and calibrate the affected channel(s).  
4. If the difficulties continue, contact RKI Instruments, Inc. for further instruction. |
Replacing the Batteries (Alkaline Version)

**WARNING:** To prevent ignition of a hazardous atmosphere, batteries must only be changed in an area known to be nonhazardous.

**AVERTISSEMENT:**Pour éviter l'inflammation d'une atmosphère dangereuse, les piles ne doivent être remplacées que dans une zone non dangereuse.

Replace the batteries when the battery icon indicates that the unit is in low battery warning. When in low battery warning, the lowest battery level indication bar disappears and the battery icon will be flashing.

**Replacing Alkaline Batteries**

**NOTE:** Use Procell PC 2400 alkaline batteries or RKI Instruments, Inc. lithium-ion battery pack 49-1625 to maintain the CSA classification of the GX-3R Pro. Use of other batteries will void the CSA classification and may void the warranty. Do not mix old/new or different types of batteries.

**NOTE:** Utiliser Procell 2400 piles alcalines ou RKI Instruments, Inc. pack batterie lithium-ion 49-1625 de maintenir la classification CSA de la GX-3R Pro. L’utilisation d’autres piles annule la classification CSA et peut annuler la garantie. Ne mélanagez pas les anciennes/nouvelles ou différents types de piles.
1. Turn off the GX-3R Pro.

**WARNING:** *Do not remove the batteries while the GX-3R Pro is on.*

2. Use a coin or a screwdriver to turn the battery cover counterclockwise.

3. Carefully remove the old alkaline batteries. Verify that the battery compartment and electrical contacts are clean.

4. Carefully install the new AAA alkaline batteries according to the battery diagram inside the battery compartment.

5. Use a coin or a screwdriver to turn the battery cover clockwise.

---

### Recharging the Batteries

**WARNING:** *To prevent ignition of a hazardous atmosphere, batteries must only be charged in an area known to be nonhazardous.*

**AVERTISSEMENT:** *Pour éviter l'inflammation d'une atmosphère dangereuse, les batteries ne doivent être chargées que dans une zone réputée non dangereuse.*

Recharge the batteries when the battery icon indicates that the unit is in low battery warning. When in low battery warning, the lowest battery level indication bar disappears and the battery icon will be flashing.

1. Make sure the GX-3R Pro is off.

2. Plug the AC adapter into an electrical outlet.

3. Connect the charging jack on the charging cable to the charging socket on the GX-3R Pro. When properly connected, a green LED will turn on at the top of the GX-3R Pro.

4. The LED at the top of the GX-3R turns orange while charging. When a full charge has been reached, approximately 3 hours, the LED turns green. Remove the charging cable from the GX-3R Pro.

---

![Figure 8: Connecting the Charging Cable](image-url)
Replacing the Buzzer Cover

The buzzer cover may need to be replaced if it becomes saturated or clogged with particles.

1. Remove the rubber boot from the GX-3R Pro.
2. Peel off the old buzzer cover located between the AIR and POWER MODE buttons.
3. If necessary, remove any remaining residue from the case.
4. Peel the backing off of the new buzzer cover.
5. Install the new buzzer cover between the AIR and POWER MODE buttons as shown below.

![Figure 9: Buzzer Cover Replacement](image)

6. Reinstall the rubber boot.

Replacing the Filters

**Combustible Gas Sensor Filter**: The H₂S filter disk is dark red in color and although it may darken over time, its color is not indicative of remaining filter life. The H₂S filter disk can absorb H₂S for 33 ppm hours and should be replaced after that much exposure. With this many ppm hours of absorption, the H₂S filter disk should be replaced after 80 minutes of exposure to 25 ppm H₂S. This equates to replacing the H₂S filter disk after 40 2-minute calibrations with a cylinder containing 25 ppm H₂S. If H₂S exists in the monitoring environment, the H₂S filter disk will have to be replaced more frequently.

**CO and H₂S Sensors’ Filter**: The dual CO/H₂S sensor has a half black/half white filter installed over it. CO-only sensors have a black charcoal filter. H₂S-only sensors have a white humidity filter. The filter should be replaced if you notice unexplained CO and/or H₂S readings.

**SO₂ Sensor Filter**: The H₂S filter disk is tan in color. The filter should be replaced every 6 months.
1. Verify that the GX-3R Pro is off.
2. Turn the GX-3R Pro upside down.
3. Use a small Phillips screwdriver to unscrew the two screws holding the bottom cover to the rest of the GX-3R Pro’s case. Only unscrew them until the heads are flush with the edge of the bottom cover.
4. Using a small flat blade screwdriver, gently pry each side of the bottom cover away from the rest of the GX-3R Pro’s case.
5. Remove the bottom cover from the rest of the GX-3R Pro’s case.
6. Remove the filter gasket/sensor retainer assembly.
7. Remove the filter gasket and the hydrophobic dust filter.
8. Gently pry out the filter you want to replace.
9. Install the new filters.
   a. Dark red H₂S scrubber disk for combustible gas sensor: The brown side of the filter case should face toward the GX-3R Pro.
   b. Black and white combo filter for CO/H₂S dual sensor: The red side of the filter case should face toward the GX-3R Pro. The black filter material should face the edge of the GX-3R Pro while the white filter material should face the H₂S scrubber disk.
   c. Black filter for CO-only sensor: The red side of the filter case should face toward the GX-3R Pro.
   d. White filter for H₂S-only sensor: The white side of the filter case should face toward the GX-3R Pro.
   e. Tan H₂S scrubber disk for SO₂ sensor: The white side of the filter case should face toward the GX-3R Pro.
10. Reinstall the filter gasket and hydrophobic dust filter onto the sensor retainer. The tabs on the gasket should face toward the GX-3R Pro. The black side of the hydrophobic dust filter should be facing up.

11. Reinstall the sensor retainer over the sensors.

12. Reattach the bottom cover to the GX-3R Pro. Push it onto the GX-3R Pro until it snaps into place.

13. Reinstall the two screws that were loosened in Step 3.

### Replacing the Hydrophobic Dust Filter

1. Verify that the GX-3R Pro is off.
2. Turn the GX-3R Pro upside down.
3. Use a small Phillips screwdriver to unscrew the two screws holding the bottom cover to the rest of the GX-3R Pro’s case. Only unscrew them until the heads are flush with the edge of the bottom cover.
4. Using a small flat blade screwdriver, gently pry each side of the bottom cover away from the rest of the GX-3R Pro’s case.
5. Remove the white hydrophobic dust filter from the filter gasket. The hydrophobic dust filter may be stuck on the bottom cover.
6. Install the new hydrophobic dust filter. Place the filter on top of the filter gasket with the black side facing up.

Figure 11: Replacing the Hydrophobic Dust Filter

7. Reattach the bottom cover to the GX-3R Pro. Push it onto the GX-3R Pro until it snaps into place.

8. Reinstall the two screws that were loosened in Step 3.

Replacing a Sensor

1. Verify that the GX-3R Pro is off.
2. Turn the GX-3R Pro upside down.
3. Use a small Phillips screwdriver to unscrew the two screws holding the bottom cover to the rest of the GX-3R Pro’s case. Only unscrew them until the heads are flush with the edge of the bottom cover.
4. Using a small flat blade screwdriver, gently pry each side of the bottom cover away from the rest of the GX-3R Pro’s case.
5. Remove the filter gasket/sensor retainer assembly from the GX-3R Pro. The sensors will be exposed.
6. Locate the sensor you want to replace and remove it from its socket.
7. Carefully insert the replacement sensor in the correct socket. Be sure that the new sensor is installed in the same position as the old sensor and that it is aligned correctly. The toxic and oxygen sensors have slots to orient the sensor. The combustible gas sensor has tabs to orient the sensor. Do not force a sensor into its slot.

![Figure 12: Replacing a Sensor](image)

8. If your instrument has a factory installed dummy sensor, ensure that it is still installed correctly. Make sure that the flat side is facing up, away from the GX-3R Pro.

9. Reinstall the filter gasket/sensor retainer assembly. The black and white filter goes over the CO/H₂S sensor with the black half of the filter facing the edge of the GX-3R Pro. Be sure the filter gasket/sensor retainer is oriented correctly.

10. If the hydrophobic dust filter came out, place the filter on top of the filter gasket with the black side facing up.

11. Reattach the bottom cover to the GX-3R Pro. Push it onto the GX-3R Pro until it snaps into place.

12. Reinstall the two screws that were loosened in Step 3.

13. Calibrate the new sensors as described in “Chapter 5: User Mode and Calibration” on page 47.
Table 17 lists part numbers for the GX-3R Pro’s replacement parts and accessories.

Appendix A: RK Link Phone App

Installing the App

1. Download and install the “RK Link” app from the App Store (for iOS) or Google Play (for Android).
2. Launch the RK Link app.
3. Allow to access device location.
4. Allow to access contacts.
5. Allow to access photos, media, and files.
6. Choose a gmail account and press “OK”. This will be used to send the alert emails.
7. If you do not have an account, select “Add account” and press “OK”. Create a gmail account, then select the new gmail account in the RK Link window.

Important Setup Notes

1. Make sure no other Bluetooth devices are connected to your phone.
2. Make sure the phone’s location services are turned on. If they’re not, the coordinates in the email that gets sent won’t have any meaning.
3. For iPhones:
   a. Open an Internet browser.
   b. Access your google account.
   c. Access the “manage google account” portion of the account.
   d. Go to “Sign-in and Security”
   e. Be sure that “Less secure apps” is turned on.

Pairing a GX-3R Pro

Multiple instruments cannot be paired with the same phone. Similarly, one instrument cannot be paired with multiple phones.

If a paired GX-3R Pro is turned off, it must be paired with the app again when it is turned back on.

If the app is closed while a GX-3R Pro is paired, the GX-3R Pro must be paired with the app again when the app is reopened.

1. Open the RK Link app.
2. Be sure your GX-3R Pro is turned on.
3. Be sure the GX-3R Pro’s Bluetooth is turned on in the Display Mode.
4. Press “Pairing”.

5. Press “Manual pairing”. If your phone’s Bluetooth is not turned on, the app will prompt you to turn it on. Press “Yes”. Then press “Manual pairing” again.

6. Select the GX-3R Pro you’d like to pair with then press “Pairing”.

---

**Appendix A: RK Link Phone App GX-3R Pro Operator’s Manual**

104
7. A “Connection completed” message will appear once the GX-3R Pro is connected to your phone. Press “OK”.

8. The Measuring Mode screen will display.
Searching for a Paired GX-3R Pro

Using the app’s detector search function allows you to find a connected GX-3R Pro that may have been set down somewhere.

**NOTE:** This feature does not work if the GX-3R Pro is operating in stealth mode.

1. Press the button in the upper right corner of the app.

2. If necessary, scroll down to make “Detector search” visible.

3. Press “Detector search”. The GX-3R Pro’s buzzer, LEDs, and vibrator will activate unless the GX-3R Pro is operating in Stealth Mode. If the GX-3R Pro is operating in Stealth Mode, the GX-3R Pro will not respond to a detector search.
Disconnecting a Paired GX-3R Pro

1. Press the button in the upper right corner of the app.

2. If necessary, scroll down to make “Pairing disconnection” visible.

3. Press “Pairing disconnection”. The GX-3R Pro will be disconnected from the phone but will remain on and functional.
Adjusting App Notification Settings

1. Press the button in the upper right corner of the app.

2. Press “Application settings”.

![Image of app interface with settings options]
3. The app notification settings appear.

- **Group notification settings**: If set to on, emails and text messages are sent out as long as the Group Settings window is set up appropriately. If set to off, emails and text messages are not sent out even if the Group Settings window is set up appropriately.

- **Device notifications**: If set to on, the app provides notifications for past due bump tests or calibrations, gas alarms, man down alarms, and any faults. Notifications can be viewed in your phone’s notification bar. If set to off, the app does not provide notifications.

- **Device sound**: If set to on, the app produces a notification sound. If set to off, the app does not produce a notification sound.

- **Sound type**: Define the app’s notification sound.

- **Device vibration**: If set to on, the app vibrates when a notification occurs. If set to off, the app does not vibrate when a notification occurs.

- **Vibration type**: Define the app’s vibration pattern.

- **Display setting**: Indicates the time format and time zone. This is not adjustable.
Defining Owner Information

Owner information can be defined with or without a GX-3R Pro paired with the app. Owner information gets sent out with email alerts along with the station ID and user ID from the GX-3R Pro.

1. Press the button in the upper right corner of the app.

2. Press “Application settings”.

![App Screen](image-url)
3. Press “Owner information setting” at the bottom of the screen. You may need to scroll down to make it visible.

4. Type in the name, company name, and department name.
Setting Up Email Alerts

Email alert setup can be done with or without a GX-3R Pro paired with the app.

Figure 13: Email Alert for Past Due Bump Test

1. Press the button in the upper right corner of the app.

GX-3R Pro Connected  GX-3R Pro Disconnected
2. Press “Application settings”.

3. Press “Email notification settings” at the bottom of the screen.
4. Press “Group settings”.

5. Type in a group name and press “New registration”.

6. To delete a group name once it’s entered:
   a. Press the button.
   b. Press “Delete group”. You may need to scroll down to make “Delete group” visible.
   c. Press each group you want to delete. A check mark will appear to the right of the group name.
d. Press “OK” at the bottom of the screen.

7. Choose the alarm types that will initiate an email alert then press the “plus” symbol.
   - ALARM: Sends an alert or notification for any gas alarm (warning, alarm, alarm H, STEL, TWA).
   - MANDOWN: Sends an alert or notification for a man down alarm.
   - FAULT: Sends an alert or notification for any sort of instrument failure, battery, sensor fail
   - REMIND: Sends an alert or notification if the instrument is due for a bump test or calibration regardless of the instrument's reminder on/off setting.
8. Type in an email address and press “New registration” to add the email address to the list.

9. To add contacts from your phone:
   a. Press the button.
   b. Press “Register from Phone Book”. You may need to scroll down to make “Register from Phone Book” visible.
   c. Select each contact you want to use. A check mark will appear to the right.
10. Press the new email address and confirm that a check mark appears to the right of the email address. If the email address does not have a check mark next to it, that email will not be included in the email alert!

11. To delete an email address once it’s entered:
   a. Press the ☐ button.
   b. Press “Delete registered address”. You may need to scroll down to make “Delete registered address” visible.
   c. Press each email address you want to delete. A check mark will appear to the right of the email address.
   d. Press “OK” at the bottom of the screen.
12. Press OK. You will be returned to the group settings screen. If you want to add another group, type in a new name and press “New registration”. Repeat steps 6 - 9.

13. Use your phone’s “Back” button to return to the Measuring Mode screen.

### Setting the Date/Time in the GX-3R Pro

1. From the home screen, press the `=` button in the upper right corner of the app.

   ![Image of GX-3R Pro app home screen]

2. Press “Gas detector clock adjustment”.

   ![Image of GX-3R Pro app menu]

3. The Menu will close and the GX-3R Pro’s date/time will be adjusted to match the phone’s date/time.
Changing GX-3R Pro Parameters

GX-3R Pro parameters can only be viewed or changed when a GX-3R Pro is paired with the app.

**Entering the Gas Detector Setting Menu**

1. From the home screen, press the button in the upper right corner of the app.

2. Press “Gas detector setting”.

3. Type in the password and press “OK”. The password depends on your instrument settings.
   - For brand new instruments whose User Mode Password parameter has not been adjusted, the password is **0000**.
   - If you turned your instrument’s User Mode Password **on**, the app’s password is your instrument’s User Mode password.
   - If you turned your instrument’s User Mode Password **on** but then turned it **off**, the app password is still the instrument’s old User Mode password. The app password does not go back to **0000** after you turn off the instrument’s User Mode password.
Alarm Settings

1. Access the Gas Detector Setting Menu as described on pg.119.
2. Press “Alarm Setting”.
3. Press the channel whose alarm points you want to view or change. The H₂S channel is selected in the example below.
4. The alarm points will be displayed.

5. Turn the alarms on or off with the toggle button next to each alarm type.
6. Adjust the alarm setpoints by pressing the current setpoint and scrolling to the desired value.

**Calibration and Bump Settings**

1. Access the Gas Detector Setting Menu as described on pg.119.
2. Press “Calibration/BUMP Setting”.

![Image of gas detector setting screen]
3. Turn the calibration and bump test reminder screens on or off with the toggle buttons. Set the calibration and bump test intervals.

4. Scroll down to view or change the auto calibration value for each channel.

**Bluetooth Settings**
1. Access the Gas Detector Setting Menu as described on pg.119.
2. Press “Bluetooth Settings”.
3. Disconnection determination time: Define the number of seconds that you want to pass between a connection being lost and a “lost connection” notification.

Pairing timeout setting: Define the number of seconds that you want to pass between the start of a detector search and a timeout from the search.

Basic Device Settings
1. Access the Gas Detector Setting Menu as described on pg.119.
2. Press “Device Basic Setting”.

![Gas Detector Setting Menu](image-url)
3. Press “Language settings”.

4. Select the language you want to use.

5. Press your phone’s “Back” button.

6. Press “Backlight setting”.

7. Set how long (in seconds) you want the backlight to stay on after each button press. The options are 0-255 seconds. The factory setting is 30 seconds.

8. Press your phone’s “Back” button.

9. Press “Update cycle setting”.

10. Set how often you want the app to refresh the readings.

11. Press your phone’s “Back” button.
Logger Data Settings

1. Access the Gas Detector Setting Menu as described on pg.119.
2. Press “Logger Data Setting”.

3. Set the interval trend time, Station ID, and User ID. The serial number is not editable.

4. Press “Send”. There is no confirmation that the information sent.
Viewing Serial Number, IDs, and Bump/Cal Information

Serial number, ID, and bump/cal information can only be viewed when a GX-3R Pro is paired with the app.

1. Press the button in the upper right corner of the app.

2. Press “Detector information”.

![Image 1](image1.png)

![Image 2](image2.png)
3. Detector information will display.

4. To view information for the last successful calibration and bump test, press the “Calibration BUMP history” button.

5. The instrument’s serial number, station ID, user ID, and part of the calibration information will display.
6. Scroll down to view the complete calibration information and/or the bump test information.

- Viewing App Version Info

App version information can be viewed with or without a GX-3R Pro paired with the app.

1. Press the button in the upper right corner of the app.

2. If necessary, scroll down to make “Version information” visible.
3. Press “Version information”.

4. Instrument information and app information will display.

5. To view the license information, press “License information”.
Appendix B: Maintenance Mode

Overview

This appendix describes the GX-3R Pro in Maintenance Mode. The GX-3R Pro is factory-set to suit most applications. Update settings in Maintenance Mode only if required for your specific application. Maintenance Mode items and their factory settings are listed in Table 18 below.

<table>
<thead>
<tr>
<th>Maintenance Mode Menu Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GAS CAL (pg.134)</td>
<td>Perform an air adjust, perform a span adjustment, change the calibration values, set the cylinder group.</td>
</tr>
<tr>
<td>AIR CAL</td>
<td>Perform a fresh air adjustment.</td>
</tr>
<tr>
<td>CO2 ZERO CAL*</td>
<td>Perform a zero adjustment on the CO₂ channel using 100% nitrogen.</td>
</tr>
<tr>
<td>AUTO CAL</td>
<td>Perform a span adjustment, set the calibration gas concentration, and set the cylinder for each gas.</td>
</tr>
<tr>
<td>AUTO CAL CYL X</td>
<td>Perform an automatic span adjustment on the gases selected for Cylinder X.</td>
</tr>
<tr>
<td>SETTING CAL-P</td>
<td>Set the calibration gas concentration for each gas.</td>
</tr>
<tr>
<td>CYL SETTING</td>
<td>Assign a cylinder (A-E) to each gas. Multiple gases can be assigned to the same cylinder.</td>
</tr>
<tr>
<td>ESCAPE</td>
<td>Return to the AUTO CAL menu item.</td>
</tr>
<tr>
<td>GAS TEST (pg.134)</td>
<td>Apply gas to test sensor response and observe alarm indications without an alarm event being recorded.</td>
</tr>
<tr>
<td>SENSOR DATE (pg.136)</td>
<td>View the replacement date for each sensor and the battery and/or set the replacement date for each sensor or the battery to the current date.</td>
</tr>
<tr>
<td>BUMP TEST (pg.137)</td>
<td>Perform a bump test.</td>
</tr>
<tr>
<td>LATCHING (pg.138)</td>
<td><strong>ON</strong> (factory setting): The GX-3R Pro remains in alarm until the alarm condition passes and POWER MODE is pressed. <strong>OFF</strong>: The GX-3R Pro automatically resets an alarm when the alarm condition passes.</td>
</tr>
<tr>
<td>DEMAND ZERO (pg.138)</td>
<td><strong>ON</strong> (factory setting): You can manually perform a fresh air adjust in Measuring Mode by pressing AIR. <strong>OFF</strong>: You cannot manually perform a fresh air adjust in Measuring Mode by pressing AIR.</td>
</tr>
<tr>
<td>Maintenance Mode Menu Item</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------</td>
<td>-------------</td>
</tr>
<tr>
<td>AUTO ZERO (pg.139)</td>
<td><strong>ON</strong>: The GX-3R Pro will ask if you want to perform a fresh air adjustment at the end of the startup sequence.&lt;br&gt;<strong>OFF</strong> (factory setting): The GX-3R Pro does not ask if you want to perform a fresh air adjustment at the end of the startup sequence.</td>
</tr>
<tr>
<td>ID DISPLAY (pg.139)</td>
<td><strong>ON</strong>: User ID and Station ID screens appear in startup sequence. IDs can be changed in Display Mode. IDs can be edited in Display Mode if <strong>D MODE SETTING</strong> in User Mode is also set to <strong>ON</strong>.&lt;br&gt;<strong>OFF</strong> (factory setting): User ID and Station ID screens do not appear in startup sequence. IDs cannot be changed in Display Mode.</td>
</tr>
<tr>
<td>ZERO SUPPRESS (pg.140)</td>
<td><strong>ON</strong> (factory setting): Not intended for field adjustment. The suppression values are:&lt;br&gt;- Combustible gas: 2% LEL&lt;br&gt;- O2: 0.5% volume&lt;br&gt;- H2S: 0.3 ppm&lt;br&gt;- CO: 2 ppm&lt;br&gt;- CO2: 0 ppm&lt;br&gt;- SO2: 0.20 ppm</td>
</tr>
<tr>
<td>ZERO FOLLOWER (pg.140)</td>
<td>Not intended for field adjustment. Oxygen channel does not support zero follower functionality. Factory setting for all other channels is <strong>ON</strong>.</td>
</tr>
<tr>
<td>DISP ZERO SUP (pg.140)</td>
<td><strong>ON</strong>: Zero suppression menu item appears in User Mode.&lt;br&gt;<strong>OFF</strong> (factory setting): Zero suppression menu item does not appear in User Mode. (Zero suppression menu item is always available in Maintenance Mode)</td>
</tr>
<tr>
<td>DISP ZERO FLWR (pg.140)</td>
<td><strong>ON</strong>: Zero follower menu item appears in User Mode.&lt;br&gt;<strong>OFF</strong> (factory setting): Zero follower menu item does not appear in User Mode. (Zero follower menu item is always available in Maintenance Mode)</td>
</tr>
<tr>
<td>DATE (pg.141)</td>
<td>Set the current date and time.</td>
</tr>
<tr>
<td>DATE FORMAT (pg.141)</td>
<td><strong>MM/DD/YYYY</strong> (factory setting): month/day/year&lt;br&gt;<strong>YYYY/MM/DD</strong>: year/month/day&lt;br&gt;<strong>DD/MM/YYYY</strong>: day/month/year</td>
</tr>
<tr>
<td>LANGUAGE (pg.142)</td>
<td>Set the language of the instrument.&lt;br&gt;Options: English (factory setting), Japanese, Italian, Spanish, German, French, Portuguese, Russian, Korean, Chinese (TC)</td>
</tr>
<tr>
<td>MAINT PASSWORD (pg.142)</td>
<td><strong>ON</strong> (factory setting): A password is needed to access Maintenance Mode. Factory-set password is <strong>8102</strong>.&lt;br&gt;<strong>OFF</strong>: No password is needed to access Maintenance Mode.</td>
</tr>
<tr>
<td>ROM/SUM (pg.143)</td>
<td>View the firmware information for the GX-3R Pro’s sensor board and main board.</td>
</tr>
<tr>
<td>LCD CONTRAST (pg.144)</td>
<td><strong>1-50</strong> (factory setting <strong>20</strong>)</td>
</tr>
<tr>
<td>M.DEFAULT (pg.145)</td>
<td>Set all parameters back to their RKI factory settings.</td>
</tr>
</tbody>
</table>
Entering Maintenance Mode

**WARNING:** The GX-3R Pro is not in operation as a gas detector while in Maintenance Mode.

1. Take the GX-3R Pro to a non-hazardous location and turn it off if it is on.
2. Press and hold AIR, then press and hold POWER MODE. You will hear a beep after one second. Continue to hold the buttons down.
3. When you hear a second beep, release the buttons.
4. The screen that appears will depend on the setting of Maintenance Mode’s **MAINT PASSWORD** item.

   If **MAINT PASSWORD** is set to **OFF**, continue with Step 7.

   If **MAINT PASSWORD** is set to **ON** (factory setting), continue with Step 5.

   ![MAINT PASSWORD Setting](image)

5. If **MAINT PASSWORD** has been set to **ON** in Maintenance Mode, a password screen will appear. The first digit will be flashing. The factory-set password is **8102** but it can be changed as desired.

6. Use AIR to select each password number then press POWER MODE to save it and move on to the next number. To go back a number, press and hold AIR and POWER MODE for a few seconds. To reverse the direction of change (ie. from increasing to decreasing or vice versa):
   a. Press and hold AIR.
   b. Immediately press POWER MODE and then release both buttons.

### Table 18: Maintenance Mode Menu Items

<table>
<thead>
<tr>
<th>Maintenance Mode Menu Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>START MEASURE (pg.145)</td>
<td>Press and release POWER MODE to begin the warmup sequence and enter Measuring Mode.</td>
</tr>
</tbody>
</table>

*Only appears in units with a CO₂ sensor installed.*
The Maintenance Mode menu displays.

Tips for Using Maintenance Mode

- To scroll from one menu item to the next, press and release AIR. To reverse the scrolling direction:
  a. Press and hold AIR.
  b. Immediately press POWER/MODE and then release both buttons.
  c. The scrolling direction returns to the original direction when you exit and reenter a menu.
- To skip an item when a question is asked, press and release AIR.
- To enter an item and to save any changes, press and release POWER MODE.
- To change a flashing parameter, use AIR. To reverse the direction of change (i.e. from increasing to decreasing or vice versa):
  a. Press and hold AIR.
  b. Immediately press POWER MODE and then release both buttons.
- To exit an entered menu item without saving a change, press and hold AIR and POWER MODE for a few seconds.

Performing a Calibration (GAS CAL)

See “Performing a Calibration (GAS CAL)” on page 57 for instructions.

Performing a Gas Test (GAS TEST)

The GAS TEST menu item allows you to apply gas to the instrument and see all alarm indications except for the buzzer indication. There is no buzzer indication in the GAS TEST menu even though the buzzer will sound in the event of a real gas alarm condition while in Measuring Mode.

Preparing for a Gas Test

To perform a gas test on the GX-3R, you will need:

- A calibration cylinder. The concentrations should be above the alarm condition you want to check. Standard alarm points are listed on pg.8.
- 0.25 LPM fixed flow regulator
- Non-absorbent tubing
• Calibration cup

1. Confirm that the regulator knob is turned all the way clockwise. Screw the 0.25 LPM fixed flow regulator onto the calibration cylinder.

2. Install the calibration cup onto the GX-3R Pro. Use the label and imprinting to make sure that the calibration cup gets installed in the correct orientation relative to the GX-3R Pro. Be sure the calibration cup is pushed on all the way.

3. Use the tubing to connect the regulator to the inlet of the calibration cup.

Performing a Gas Test

1. While in Maintenance Mode, use AIR to place the cursor next to GAS TEST.

2. Press and release POWER MODE. The current gas readings display. The bottom of the LCD indicates “GAS TEST” and “BUZZER OFF”.

3. Turn the regulator knob counterclockwise to open the regulator.

4. The instrument will initiate alarm indications except for the buzzer. There is no buzzer indication in the GAS TEST menu even though the buzzer will sound in the event of a real gas alarm condition.
5. Turn the regulator knob clockwise to close the regulator.
6. Unscrew the regulator from the calibration cylinder.
7. Remove the calibration cup from the GX-3R.
8. Store the calibration kit in a safe and convenient place.
9. Press and release POWER MODE to return to Maintenance Mode.

Sensor/Battery Replacement Date (SENSOR DATE)

The **SENSOR DATE** menu item allows you to keep track of when the sensors and the battery were replaced.

1. While in Maintenance Mode, use AIR to place the cursor next to **SENSOR DATE**.

2. Press and release POWER MODE. The combustible gas sensor’s replacement date will display.
3. Use AIR to scroll to the item whose replacement date you want to view or change.

4. To change the replacement date:
   a. With the desired item displayed, press and release POWER MODE.
   b. Press and release POWER MODE again to set the replacement date to the current date.

5. Use the AIR button to scroll to the ESCAPE menu item.

6. Press and release POWER MODE to return to Maintenance Mode.

**Performing a Bump Test (BUMP TEST)**

See “Performing a Bump Test (BUMP TEST)” on page 53 for instructions.
Setting Alarms to Latching or Self-Resetting (LATCHING)

**ON** (factory setting): The GX-3R Pro remains in alarm until the alarm condition passes and POWER MODE is pressed.

**OFF**: The GX-3R Pro automatically resets an alarm when the alarm condition passes.

1. While in Maintenance Mode, use AIR to place the cursor next to LATCHING.
2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to Maintenance Mode.

Turning Demand Zero On/Off (DEMAND ZERO)

**ON** (factory setting): You can manually perform a fresh air adjust in Measuring Mode by pressing AIR.

**OFF**: You cannot manually perform a fresh air adjust in Measuring Mode.

1. While in Maintenance Mode, use AIR to place the cursor next to DEMAND ZERO.
2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to Maintenance Mode.
Turning Auto Zero On/Off (AUTO ZERO)

**ON:** The GX-3R Pro will ask if you want to perform a fresh air adjustment at the end of the startup sequence.

**OFF (factory setting):** The GX-3R Pro does not ask if you want to perform a fresh air adjustment at the end of the startup sequence.

1. While in Maintenance Mode, use AIR to place the cursor next to AUTO ZERO.

   2. Press and release POWER MODE. The current setting flashes.
   3. Use AIR to display the desired setting.
   4. Press and release POWER MODE to save the setting and return to Maintenance Mode.

Turning ID Display Function On/Off (ID DISPLAY)

**ON:** The User ID and Station ID screens appear in startup sequence. If D MODE SETTING in User Mode is also set to ON, then the IDs can be changed in Display Mode.

**OFF (factory setting):** The User ID and Station ID screens do not appear in startup sequence and the IDs cannot be changed in Display Mode.

1. While in Maintenance Mode, use AIR to place the cursor next to ID DISPLAY.

   2. Press and release POWER MODE. The current setting flashes.
   3. Use AIR to display the desired setting.
   4. Press and release POWER MODE to save the setting and return to Maintenance Mode.
Turning Zero Suppression On/Off (ZERO SUPPRESS)

The ZERO SUPPRESS setting is not intended for field adjustment. The default setting for each sensor is ON.

<table>
<thead>
<tr>
<th>Sensor</th>
<th>Zero Suppression Value</th>

<td>2 ppm</td>
</tr>
<tr>
<td>CO₂</td>
<td>0 ppm</td>
</tr>
<tr>
<td>SO₂</td>
<td>0.20 ppm</td>
</tr>
</tbody>
</table>

Turning Zero Follower On/Off (ZERO FOLLOWER)

The ZERO FOLLOWER setting is not intended for field adjustment. The oxygen channel does not support zero follower functionality. The default setting is ON for all channels.

User Mode Zero Suppression (DISP ZERO SUP)

**ON**: Zero suppression menu item appears in User Mode.

**OFF** (factory setting): Zero suppression menu item does not appear in User Mode. Zero suppression menu item is always available in Maintenance Mode.

It is not normally necessary to have the zero suppression menu item appear in User Mode. Contact RKI Instruments before turning this setting on.

User Mode Zero Follower (DISP ZERO FLWR)

**ON**: Zero follower menu item appears in User Mode.

**OFF** (factory setting): Zero follower menu item does not appear in User Mode. Zero follower menu item is always available in Maintenance Mode.

It is not normally necessary to have the zero follower menu item appear in User Mode. Contact RKI Instruments before turning this setting on.
Setting the Date/Time (DATE)

1. While in Maintenance Mode, use AIR to place the cursor next to DATE.

2. Press and release POWER MODE. The date and time will be displayed with the year flashing.

3. Use AIR to display the desired year.
4. Press and release POWER MODE to save the setting. The month setting flashes.
5. Repeat Step 3 and Step 4 to enter the month, day, hours, and minutes settings. The date and time will be saved and the instrument will return to Maintenance Mode.

Setting the Date Format (DATE FORMAT)

**MM/DD/YYYY** (factory setting): month/day/year.

**YYYY/MM/DD**: year, month, day.

**DD/MM/YYYY**: day, month, year.

1. While in Maintenance Mode, use AIR to place the cursor next to DATE FORMAT.

2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to Maintenance Mode.
Setting the Instrument Language (LANGUAGE)

English (factory setting), Japanese, Italian, Spanish, German, French, Portuguese, Russian, Korean, Chinese (TC)

1. While in Maintenance Mode, use AIR to place the cursor next to LANGUAGE.

2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to Maintenance Mode.

Turning the Password On/Off (MAINT PASSWORD)

**ON** (factory setting): The GX-3R Pro prompts you for a password when you enter Maintenance Mode. The factory-set password is 8102 but can be changed as desired.

**OFF**: No password is required to enter Maintenance Mode.

1. While in Maintenance Mode, use AIR to place the cursor next to PASSWORD.

2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. If you selected **OFF**, press and release POWER MODE to save the setting and return Maintenance Mode.

   If you selected **ON**, continue with Step 5.
5. Press and release POWER MODE. The Set Password Screen appears. The current password is at the top of the screen with the first digit flashing.

6. Use AIR to display a number from 0 to 9.

7. Press and release POWER MODE to enter the selection and advance to the next number. To go back a number, press and hold AIR and POWER MODE for a few seconds.

8. Repeat Step 6 and Step 7 to select the remaining numbers. When you press and release POWER MODE to enter the last number, the password is saved and the instrument returns to Maintenance Mode.

---

Viewing the ROM/SUM (ROM/SUM)

The ROM/SUM screen shows the firmware version that is loaded in the instrument and the firmware checksum.

1. While in Maintenance Mode, use AIR to place the cursor next to ROM/SUM.
2. Press and release POWER MODE. The screen will cycle through the ROM/SUM of the main board, the ROM/SUM of the sensor board, the ROM/SUM of the IR sensor (if an IR sensor is installed), and the Bluetooth version. The ROM is the top value and the SUM is the bottom value.

3. Press and release POWER MODE to return to the ROM/SUM menu item in Maintenance Mode.

Adjusting the LCD’s Contrast (LCD CONTRAST)

Higher number means darker background. Lower number means lighter background. 1-50. 20 is factory setting.

1. While in Maintenance Mode, use AIR to place the cursor next to LCD CONTRAST.

2. Press and release POWER MODE. The current setting flashes.

3. Use AIR to display the desired setting.

4. Press and release POWER MODE to save the setting and return to Maintenance Mode.
Performing a Default (M.DEFAULT)

Performing a default operation in Maintenance Mode returns all parameters to their RKI factory settings.

1. While in Maintenance Mode, use AIR to place the cursor next to M.DEFAULT.

2. Press and release POWER MODE. The instrument asks if you want to restore all defaults.

3. Press and release POWER MODE to continue.

4. Press and release AIR to return to Maintenance Mode.

5. The instrument asks if you are sure you want to restore the defaults.

6. Press and release POWER MODE to continue. Press and release AIR to return to Maintenance Mode.

7. Once the defaults are restored, the instrument will return to Maintenance Mode.

Exiting Maintenance Mode (START MEASURE)

1. While in Maintenance Mode, use AIR to place the cursor next to START MEASURE.

2. Press and release POWER MODE.

3. The instrument will begin its start-up sequence.
Appendix C: Gas Select Mode

Overview

This appendix describes the GX-3R Pro in Gas Select Mode. The GX-3R Pro is factory-set to suit most applications. Update settings in Gas Select Mode only if required for your specific application. A description of the Gas Select Mode items is shown in Table 19 below.

Table 19: Gas Select Mode Menu Items

<table>
<thead>
<tr>
<th>Menu Item (Page # of Description)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GAS COMBO (pg.148)</td>
<td>Turn channels on or off and changes target gas for each channel.</td>
</tr>
<tr>
<td>SET DEF ALM-P (pg.150)</td>
<td>Allows you to set the current alarm points as the default alarm points.</td>
</tr>
<tr>
<td>DISP MAX SPAN (pg.150)</td>
<td><strong>ON</strong>: Maximum span screen appears after a successful calibration. <strong>OFF</strong> (factory setting): No maximum span screen appears.</td>
</tr>
<tr>
<td>STEALTH (pg.151)</td>
<td><strong>STEALTH ON</strong>: No backlight, LED, or buzzer operation. <strong>STEALTH OFF</strong> (factory setting): Backlight, LED, and buzzer operate normally.</td>
</tr>
<tr>
<td>CHANGE LEL (pg.152)</td>
<td><strong>STANDARD</strong> (factory setting): Apply standard settings for lower explosive limit’s ppm level. <strong>IEC</strong>: Apply IEC settings for lower explosive limit’s ppm level. <strong>ISO</strong>: Apply ISO settings for lower explosive limit’s ppm level.</td>
</tr>
<tr>

</table>

Entering Gas Select Mode

**WARNING:** *The GX-3R Pro is not in operation as a gas detector while in Gas Select Mode.*

1. Take the GX-3R Pro to a non-hazardous location and turn it off if it is on.
2. Press and hold AIR, then press and hold POWER MODE. You will hear a beep after one second. Continue to hold the buttons down.
3. You will hear a second beep. Continue to hold the buttons down.
4. When you hear a third beep, release the buttons.
5. The password screen will appear. The first digit will be flashing. The password is **2014**.

6. Use AIR to select each password number then press POWER MODE to save it and move on to the next number. To go back a number, press and hold AIR and POWER MODE for a few seconds. To reverse the direction of change (ie. from increasing to decreasing or vice versa):
   a. Press and hold AIR.
   b. Immediately press POWER MODE and then release both buttons.

7. The Gas Select Mode menu displays.

8. Use AIR to move through the Gas Select Mode menu items.

**Tips for Using Gas Select Mode**

- To scroll from one menu item to the next, press and release AIR. To reverse the scrolling direction:
  a. Press and hold AIR.
  b. Immediately press POWER/MODE and then release both buttons.
  c. The scrolling direction returns to the original direction when you exit and reenter a menu.

- To skip an item when a question is asked, press and release AIR.

- To enter an item and to save any changes, press and release POWER MODE.

- To change a flashing parameter, use AIR. To reverse the direction of change (ie. from increasing to decreasing or vice versa):
  a. Press and hold AIR.
  b. Immediately press POWER MODE and then release both buttons.

- To exit an entered menu item without saving a change, press and hold AIR and POWER MODE for a few seconds.
Changing the Gas Combination (GAS COMBO)

The GAS COMBO menu item allows you to turn channels on and off.

1. While in Gas Select Mode, use AIR to place the cursor next to GAS COMBO.

2. Press and release POWER MODE. The first channel is displayed.

3. Press AIR to scroll through to the instrument channel whose target gas you want to change.
4. Press and release POWER MODE.
5. The target gas for the channel will display.

6. Use AIR to change the target gas or turn the channel off.

</tbody>
</table>

*If CH4_VOL is selected, the CHANGE LEL item in Gas Select Mode has no effect on operation.*

7. Press and release POWER MODE to save the setting.
8. Repeat Step 1 - Step 7 to change the target gas for other channels.
9. Use AIR to scroll to ESCAPE.
10. Press and release POWER MODE. The instrument will return to Gas Select Mode.

Saving the Alarm Points (SET DEF ALM-P)

Performing a SET DEF ALM-P operation saves the current alarm setpoints.
Performing a DEFAULT ALM-P operation in the ALARM SETTING User Mode menu item sets the instrument’s alarm points to those saved during the SET DEF ALM-P operation (if performed).
Performing a SET DEF ALM-P operation has no effect on an M.DEFAULT in Maintenance Mode. An M.DEFAULT operation will return all instrument settings to the RKI default regardless of if a SET DEF ALM-P operation was performed.

1. While in Gas Select Mode, use AIR to place the cursor next to SET DEF ALM-P.

2. Press and release POWER MODE. The display alternate between the following screens.

3. Press and release POWER MODE to save the current alarm point settings as the default.
4. The instrument will return to Gas Select Mode.

Turning the Calibration Max Span On/Off (DISP MAX SPAN)

ON: After a passed calibration, the GX-3R displays the maximum possible adjustment it could have made to the response reading. So if the combustible gas channel was calibrated with 50% LEL gas and the maximum indicated span is 95% LEL, this means that there was enough adjustment left on that channel to set the reading to 95% LEL when the detector was exposed to 50% LEL gas. If the maximum span value is close to the calibration gas value, for example if it is 53% LEL when exposed to 50% LEL gas, the sensor should be replaced soon. The upper limit on the maximum adjustment indicated for all channels except for oxygen is either twice the calibration value or full scale, whichever is lower. The upper limit on the maximum adjustment indicated for the oxygen channel is 25.0% volume.
OFF (factory setting): There is no maximum span indication at the end of a calibration.
1. While in Gas Select Mode, use AIR to place the cursor next to **DISP MAX SPAN**.

2. Press and release POWER MODE. The current setting flashes.
3. Use AIR to display the desired setting.
4. Press and release POWER MODE to save the setting and return to Gas Select Mode.

---

**Stealth and Vibrator Settings (STEALTH)**

**STEALTH**

**ON**:  
- The instrument’s backlight does not come on, regardless of the **BACKLIGHT TIME** setting.
- The instrument’s LEDs do not come on for any reason, even alarm conditions.
- The instrument’s buzzer does not sound for any reason, even alarm conditions.
- An “S” appears at the top of the LCD.

**OFF** (factory setting): The instrument’s backlight and LEDs operate normally.

**VIBRATION**

*The VIBRATION setting only affects instrument operation if **STEALTH** is set to **ON**.*

**ON**: The vibrator activates for alarm conditions. It can be useful to have this feature turned on if you have also turned **STEALTH** on.

**OFF** (factory setting): The vibrator does not activate for any reason.

1. While in Gas Select Mode, use AIR to place the cursor next to **DISP MAX SPAN**.

2. Press and release POWER MODE. The current setting flashes.
3. Press and release POWER MODE. The current **STEALTH** setting flashes.
4. Use AIR to display the desired setting.
5. Press and release POWER MODE. The current **VIBRATION** setting flashes.
6. Use AIR to display the desired setting.
7. Press and release POWER MODE to save the setting and return to Gas Select Mode.
LEL Definition (CHANGE LEL)

The CHANGE LEL menu item defines what standard the instrument follows in determining the LEL (lower explosive limit) for the combustible channel’s target gas.

**STANDARD**: Apply the standards settings for the lower explosive limit’s ppm level.

**IEC**: Apply the IEC settings for the lower explosive limit’s ppm level.

**ISO**: Apply the ISO settings for the lower explosive limit’s ppm level.

**Table 21: Lower Explosive Limit ppm Levels**

Warranty

RKI Instruments, Inc. warrants the GX-3R Pro sold by us to be free from defects in materials, workmanship, and performance for a period of three years from the date of shipment from RKI Instruments, Inc. This includes the instrument and the original sensors. Replacement parts are warranted for 1 year from the date of their shipment from RKI Instruments, Inc. except for replacement sensors which are warranted for 3 years. Any parts found defective within their warranty period will be repaired or replaced, at our option, free of charge. This warranty does not apply to those items which by their nature are subject to deterioration or consumption in normal service, and which must be cleaned, repaired, or replaced on a routine basis. Examples of such items are:

- Absorbent cartridges
- Filter elements, disks, or sheets
- Pump diaphragms and valves

Warranty is voided by abuse including mechanical damage, alteration, rough handling, or repair procedures not in accordance with the instruction manual. This warranty indicates the full extent of our liability, and we are not responsible for removal or replacement costs, local repair costs, transportation costs, or contingent expenses incurred without our prior approval.

THIS WARRANTY IS EXPRESSLY IN LIEU OF ANY AND ALL OTHER WARRANTIES AND REPRESENTATIONS, EXPRESSED OR IMPLIED, AND ALL OTHER OBLIGATIONS OR LIABILITIES ON THE PART OF RKI INSTRUMENTS, INC. INCLUDING BUT NOT LIMITED TO THE WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT SHALL RKI INSTRUMENTS, INC. BE LIABLE FOR INDIRECT, INCIDENTAL, OR CONSEQUENTIAL LOSS OR DAMAGE OF ANY KIND CONNECTED WITH THE USE OF ITS PRODUCTS OR FAILURE OF ITS PRODUCTS TO FUNCTION OR OPERATE PROPERLY.

This warranty covers instruments and parts sold to users only by authorized distributors, dealers, and representatives as appointed by RKI Instruments, Inc.

We do not assume indemnification for any accident or damage caused by the operation of this gas monitor and our warranty is limited to replacement of parts or our complete goods.
