The **Grundfos Redi-Flo3 Electrical Submersible Pump** is ideal for the removal of polluted groundwater. Users have the capability to change the pump performance while the pump is installed in the well. Typical applications include environmental remediation, leachate extraction, total fluids recovery, tank-to-tank transfer, and sampling.

Grundfos Redi-Flo4™ submersible pumps are constructed of PTFE and stainless steel to handle the rigors of contaminated groundwater pumping. Ideal for sampling and continuous operation in remediation applications. Grundfos Redi-Flo4™ environmental submersibles meet EPA guidelines for environmental sampling equipment and have been proven through extensive use in the field to be the industry choice.
