X-Ray Fluorescence Metal Analyzer

Innov-X Alpha Series XRF

The Innov-X tube-based Alpha Series™ takes on-site environmental metals analysis to a new level. It features a miniature, rugged X-ray tube. The Alpha Series™ provides reliable analysis on RCRA, Priority Pollutant metals and other elements in soils. Meets EPA Method 6200 for metals in soils.

The Alpha Series XRF is used for a wide variety of on-site environmental analyses. These include in-situ soil analysis for rapid site investigations and remediation projects. Operators may test directly on the ground or through bagged samples. By collecting and preparing soil samples you can achieve laboratory quality results in the field.

FEATURES

- Superior performance on Cr and other metals.
- Utilizes advanced and universal XRF data modeling: Compton Normalization – “Internal Standard” provides for quantitative analysis without site-specific calibrations. Fundamental Parameters – Standardless, ideal for samples with high and low concentrations of several elements. Empirical Calibrations – “Calibration Curves”, allows user generated calibration curves.
- Add new elements and calibrations – call for details.
- View spectra on screen.
- Compare spectra for comparative analysis and display results versus standards.
- Stored tests can be re-run with new parameters or models.
- Data Security: stored in binary format for data integrity.
